# 1. Overview of EB tresos AutoCore Generic 8 LIN Stack documentation

Welcome to the EB tresos AutoCore Generic 8 LIN Stack (ACG8 LIN Stack) product documentation.

This document provides:

- ▶ [Chapter 2, “Supported features”](#): list of features supported by the ACG8 LIN Stack
- ▶ [Chapter 3, “ACG8 LIN Stack release notes”](#): release notes for the ACG8 LIN Stack modules
- ▶ [Chapter 4, “ACG8 LIN Stack user’s guide”](#): background information and instructions
- ▶ [Chapter 5, “ACG8 LIN Stack module references”](#): information about configuration parameters and the application programming interface

## 2. Supported features

### 2.1. Supported Linlf features

- ▶ **Support for post-build:** Support for handling post-build loadable configuration.

## 3. ACG8 LIN Stack release notes

### 3.1. Overview

This chapter provides the ACG8 LIN Stack product specific release notes. General release notes that are applicable to all products are provided in the EB tresos AutoCore Generic documentation. Refer to the general release notes in addition to the product release notes documented here.

### 3.2. Scope of the release

#### 3.2.1. Configuration tool

Your release of EB tresos AutoCore is compatible with the release of the EB tresos Studio configuration tool:

- ▶ EB tresos Studio: 27.1.0 b200625-0900

#### 3.2.2. AUTOSAR modules

The following table lists the AUTOSAR modules that are part of this ACG8 LIN Stack release.

Module name	AUTOSAR version and revision	SWS version and revision	Module version	Supplier
<a href="#">LinIf</a>	4.0.3 []	4.0.0 [0000]	5.8.17	Elektrobit Automotive GmbH
<a href="#">LinSM</a>	4.0.3 []	1.3.0 [0000]	3.4.11	Elektrobit Automotive GmbH

Table 3.1. Hardware-Independent Modules specified by the AUTOSAR standard

#### 3.2.3. EB (Elektrobit) modules

The following table lists all modules which are part of this release but are not specified by the AUTOSAR standard. These modules include tooling developed by EB or they may hold files shared by all other modules.

Module name	Module version	Supplier
No EB modules available		

Table 3.2. Modules not specified by the AUTOSAR standard

## 3.2.4. MCAL modules and EB tresos AutoCore OS

For information about MCAL modules and OS, refer to the respective documentation, which is available as PDF at `$TRESOS_BASE/doc/3.0_EB_tresos_AutoCore_OS` and `$TRESOS_BASE/doc/5.0_MCAL_modules`<sup>1</sup>. It is also available in the online help in EB tresos Studio. Browse to the folders `EB tresos AutoCore OS` and `MCAL modules`.

## 3.3. Module release notes

### 3.3.1. LinIf module release notes

- ▶ AUTOSAR R4.0 Rev 3
- ▶ AUTOSAR SWS document version: 4.0.0
- ▶ Module version: 5.8.17.B337087
- ▶ Supplier: Elektrobit Automotive GmbH

#### 3.3.1.1. Change log

This chapter lists the changes between different versions.

##### Module version 5.8.17

2020-06-19

- ▶ ASCLINIF-1210 Fixed known issue: LinIf switches to operational before time
- ▶ Schedule table switch behavior when same schedule table is called refined

##### Module version 5.8.16

2020-04-24

---

<sup>1</sup>`$TRESOS_BASE` is the location at which you installed EB tresos Studio.

- ▶ ASCLINIF-1207 Fixed known issue: LinIf confirms sleep to LinSM even though a CDD is configured

#### **Module version 5.8.15**

2020-03-25

- ▶ ASCLINIF-1203 Fixed known issue: Wakeup during sleep transition does not work as expected for ASR 4.2.2 and above drivers

#### **Module version 5.8.14**

2020-02-21

- ▶ ASCLINIF-1191 Fixed known issue: LinIf does not confirm a schedule switch to NULL\_SCHEDULE caused by a sleep request

#### **Module version 5.8.13**

2020-01-24

- ▶ ASCLINIF-1189 Fixed known issue: Transceiver list is wrongly populated in LinIf\_Macros.m

#### **Module version 5.8.12**

2019-12-06

- ▶ ASCLINIF-1187 Fixed known issue: The LinTp\_GetAvailablePduRTxBufferLength does not initialize pduInfo.SduDataPtr

#### **Module version 5.8.11**

2019-11-08

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.8.10**

2019-10-11

- ▶ ASCLINIF-1165 Fixed known issue: Module configuration pointer access occurs before checking for uninitialized access of the function

#### **Module version 5.8.9**

2019-09-06

- ▶ Add 4.0 and 4.2 Lin driver initialization support

#### **Module version 5.8.8**

2019-07-12

- ▶ ASCLINIF-1150 Fixed known issue: LinIf\_ScheduleRequest uses LinIf Channel ID as ComM Channel ID
- ▶ ASCLINIF-1155 Fixed known issue: End of Schedule Notification erroneously called before the last entry's status check

#### **Module version 5.8.7**

2019-06-14

- ▶ ASCLINIF-1136 Fixed known issue: LinTp does not notify PduR that functional/physical transmission was aborted because schedule table change failed

#### **Module version 5.8.6**

2019-05-17

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.8.5**

2019-04-18

- ▶ ASCLINIF-1130 Fixed known issue: Frame reporting to Mirror during transmission non-functional

#### **Module version 5.8.4**

2019-03-22

- ▶ ASCLINIF-1127 Fixed known issue: LinIf accesses the post-build configuration without checking the channel ID

#### **Module version 5.8.3**

2019-02-15

- ▶ Internal module improvement. This module version update does not affect module functionality
- ▶ ASCLINIF-1119 Fixed known issue: LinTp\_Transmit()/LinIf\_Transmit() do not notify the upper layer if the Lin channel is in NO\_COMM.

#### **Module version 5.8.2**

2019-01-25

- ▶ Added Support for NMoE (BusMirroring).

#### **Module version 5.8.1**

2018-12-21

- ▶ ASCLINIF-1112 Fixed known issue: Symbolic name values for LinIfChannels are erroneously taken from ComM.

#### **Module version 5.8.0**

2018-10-26

- ▶ ASCLINIF-1101 Fixed known issue: LinIf assigns slave-to-slave frames to incorrect slots
- ▶ Changed LinIf APIs incorrectly expecting ComM handle IDs

#### **Module version 5.7.5**

2018-08-24

- ▶ Added support for forwarding the status from `Lin_GetStatus()` to the user callout
- ▶ Added support for `Lin Confirmation Notification` and `LIN_RX_NO_REPONSE` handling in the user callout

#### **Module version 5.7.4**

2018-06-22

- ▶ Added support referenceable `NULL_SCHEDULE` `LinIfScheduleTable`

#### **Module version 5.7.3**

2018-05-25

- ▶ Added support for configurable upper layer

#### **Module version 5.7.2**

2018-04-20

- ▶ Add support for `UINT32 PduLengthType`.

- ▶ Added support for custom end-of-schedule notifications

#### **Module version 5.7.1**

2017-09-22

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.7.0**

2017-07-28

- ▶ Fine grained DEM reporting
- ▶ Comply to MISRA-C:2012

#### **Module version 5.6.3**

2017-06-30

#### **Module version 5.6.2**

2017-06-02

#### **Module version 5.6.1**

2017-05-05

- ▶ ASCLINIF-1041 Fixed known issue: LinIf\_LinDriverConfig[ ] is generated empty if Lin configuration name is not LinGlobalConfig\_0
- ▶ ASCLINIF-1042 Fixed known issue: If the VendorApilnfix parameter is not present in the Lin driver, the LinIf will not generate
- ▶ ASCLINIF-1043 Fixed known issue: If LinIfLinDriverAPI is 'REV42' and LinIfCheckWakeupSupported is not activated, LinIf\_LinDriverWakeupIntFctPtrType is not available

#### **Module version 5.6.0**

2017-03-31

- ▶ Internal module improvement. This module version update does not affect module functionality
- ▶ Add proper name mangling for header files and API functions of Lin and LinTrcv

- ▶ Implement Lin transceiver support

#### **Module version 5.5.0**

2017-03-10

- ▶ Internal module improvement. This module version update does not affect module functionality
- ▶ Implement support for 4.2.x Lin drivers

#### **Module version 5.4.9**

2017-02-03

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.4.8**

2016-11-04

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.4.7**

2016-09-09

- ▶ ASCLINIF-1005 Fixed known issue: Config parameter NumberOfRespPendingFrames is used in a wrong way. Decrement NumberOfRespPendingFrames by one in order to keep the same (erroneous) behavior as before.

#### **Module version 5.4.6**

2016-08-05

- ▶ ASCLINIF-1004 Fixed known issue: NRC response pending frame does not restart P2 timer

#### **Module version 5.4.5**

2016-05-25

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.4.4**

2016-02-05

- ▶ ASCLINIF-990 Fixed known issue: Nested MemMap section if TS\_MERGED\_COMPILE is activated
- ▶ ASCLINIF-991 Fixed known issue: LinIfSupplierId cannot be set to 32767
- ▶ Added support for Debug & Trace with custom header file configurable via parameter `BaseDbgHeaderFile`

#### **Module version 5.4.3**

2015-11-06

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 5.4.2**

2015-06-19

- ▶ Fixed error reported by broken ENABLE xdm check of the LinIfCollisionResolvingRef parameter
- ▶ Adapted source code comments with ReqM2 tags to conventions
- ▶ Removed misra deviation comment 19.1 from source code

#### **Module version 5.4.1**

2015-02-20

- ▶ Removed configuration parameter LinIfTrcvWakeupNotification (LINIF048\_Conf)
- ▶ Changed parameter range for LinTpP2Timing, LinTpP2Max, LinIfFunctionId
- ▶ Modified LinIf to cancel a go-to-sleep command request if wakeup is requested before the go-to-sleep command is transmitted
- ▶ Added configuration check for maximum Pdu length
- ▶ Modified LinIf to call LinSM\_ScheduleRequestConfirmation() even if the current run continuous schedule table is requested

#### **Module version 5.4.0**

2014-10-03

- ▶ ASCLINIF-930 Fixed known issue: If more than 255 unconditional frames are configured, a schedule table might process an unexpected frame
- ▶ Added an optional callout which is called in case of Lin bus errors for user error handling
- ▶ ASCLINIF-939 Fixed known issue: It is not possible to send MRF and receive SRF frames without LinTp
- ▶ Removed obsolete legacy symbolic name values

- ▶ ASCLINIF-946 Fixed known issue: `LinIf_GotoSleep`, `LinIf_Wakeup`, `LinIf_ScheduleRequest` may access configuration data of not initialized module

### Module version 5.3.3

2014-04-25

- ▶ Removed xdm check which verifies that `LinIfEntryIndex` must start from 0 and be consecutive within one schedule table
- ▶ Added xdm check which verifies that `LinIfDelay` is bigger than the maximum frame transmission duration + `LinIfJitter`
- ▶ ASCLINIF-909 Fixed known issue: `LinIf` may call `Lin` API functions with an incorrect channel ID if `LinIfMapChannelIdDirect` is set to true
- ▶ ASCLINIF-913 Fixed known issue: `LinIf` may call `ComM` API functions with an incorrect channel ID if `LinIfMapComMChannelIdDirect` is set to true
- ▶ ASCLINIF-912 Fixed known issue: `LinIf` BSWMD is generated with invalid information causing RTE to report an error
- ▶ ASCLINIF-923 Fixed known issue: Build error due to missing file `LinIf/LinTp_PbCfg.cif` code generation for `LinIf/LinTp` is disabled and only post-build configuration is compiled

### Module version 5.3.2

2013-10-11

- ▶ Removed compiler warning about unused variable `ScheduleChangeIf` `LINTP_SCHEDULE_CHANGE_DIAG_API == STD_OFF`
- ▶ Added defensive programming instrumentation for unreachable code fragments
- ▶ ASCLINIF-837 Fixed known issue: Physical transmission might not properly abort if a new physical transmission is invoked on the same channel
- ▶ ASCLINIF-838 Fixed known issue: `LinTp_Transmit()` is rejected if a previous transmission has been requested on the same LIN channel, but the `LinIf_Mainfunction()` has not executed in between these requests
- ▶ ASCLINIF-836 Fixed known issue: `LinTp` does not expect response for user-defined diagnostic messages
- ▶ Removed compiler warning about unused variable `invalidWakeupSourceIf` `LINIF_DEV_ERROR_DETECT == STD_OFF`
- ▶ Added xdm check which verifies that `LinSM` confirmation timeout is greater than the time it takes to execute a goto-sleep command
- ▶ ASCLINIF-853 Fixed known issue: A compiler error occurs if `PbCfgMis` is used for passing a post-build time configuration to `LinTp`, but not to `LinIf`

- ▶ ASCLINIF-856 Fixed known issue: `LinIf_Init()` uses `const void*` for post-build config instead of `const LinIf_ConfigType*`
- ▶ Convert enum type definitions to `uint8types`
- ▶ ASCLINIF-866 Fixed known issue: If the master request frame (MRF) for a functional transmission fails, `PduR_LinTpTxConfirmation()` is called with a wrong `TxPduIdvalue`
- ▶ ASCLINIF-868 Fixed known issue: `LinTp` might call `BswM_LinTp_RequestMode()` with `LINTP_APPLICATIVE_SCHEDULE` even if `LinTp` communication is no longer active
- ▶ ASCLINIF-869 Fixed known issue: Wrong memory might be accessed when evaluating configuration parameter value `LinTpScheduleChangeDiagin` in case of P2 timeout
- ▶ Updated symbolic name value naming schema according to AUTOSAR 4.0 Rev 3
- ▶ ASCLINIF-870 Fixed known issue: If `LinTp_Transmit()` is called for an uninitialized `LinTp`, an illegal memory is accessed even if `Det` is enabled
- ▶ Extended MCG to generate XML code for Binary Code Generation

### Module version 5.3.1

2013-06-21

- ▶ ASCLINIF-755 Fixed known issue: Configuration parameters `LinTpNumberOfRxNSdu` and `LinTpNumberOfTxNSdu` have invalid default values
- ▶ ASCLINIF-758 Fixed known issue: `LinIf` passes wrong `HandleId` when calling `PduR_LinIfRxIndcia-tion` for unconditional Rx-frames
- ▶ Added checking of configuration and platform-specific signature to prevent loading of incompatible post-build configuration
- ▶ Added checking of published information signature to prevent loading of incompatible post-build configuration
- ▶ ASCLINIF-788 Fixed known issue: It is not possible to receive messages with a payload length larger than 255 bytes
- ▶ ASCLINIF-789 Fixed known issue: `LinTp_CancelReceive()` does not work if the value of parameter `LinTpRxSduId` is larger than 255
- ▶ ASCLINIF-804 Fixed known issue: `PbcfgM` cannot differentiate `LinTp` and `LinIf` configuration
- ▶ ASCLINIF-801 Fixed known issue: `LinIf` post-build time configuration does not compile if used by `PBcfgM`
- ▶ ASCLINIF-797 Fixed known issue: `LinTp` ignores receive messages containing 7 bytes payload length
- ▶ ASCLINIF-796 Fixed known issue: `LinTp` passes the wrong value for the `network` parameter when calling `BswM_LinTp_RequestMode()`
- ▶ ASCLINIF-817 Fixed known issue: Memory mapping macros incorrectly define both variables and constants with the same memory section name

- ▶ ASCLINIF-808 Fixed known issue: Processing of empty schedule tables may cause transmission of unexpected frames
- ▶ ASCLINIF-821 Fixed known issue: LinTp does not call `BswM_LinTp_RequestMode()` with parameter `LINTP_DIAG_REQUEST` at the beginning of a functional transmission

#### Module version 5.3.0

2013-02-14

- ▶ Registered `HandleIdwizard` for `ScheduleTableIdx` generation
- ▶ Updated reference paths of `LinIf-ComMChannel` reference for the introduction of `ComMConfigSet` container
- ▶ Added relocatability to post-build configuration

#### Module version 5.2.0

2012-10-24

- ▶ ASCLINIF-653 Fixed known issue: Post-build configuration of `LinIf` and `LinTp` references external symbols when used with post-build configuration manager
- ▶ ASCLINIF-651 Fixed known issue: The configuration name is different from the name of the `MULTIPLE-CONFIGURATION` container
- ▶ Implemented `Tp-API` according to AUTOSAR 4.0 Rev 3
- ▶ Implemented `Handle ID` policy according to AUTOSAR 4.0 Rev 3
- ▶ Changed the top-level structure of the software-component description in the ARXML files from `/AUTOSAR/LinIf` to `/AUTOSAR_LinIf`
- ▶ Updated to Lin Specification Package Revision 2.1
- ▶ ASCLINIF-702 Fixed known issue: Wrong `ComMChannelId` is used if `LinIfMapComMChannelIdDirect` is enabled, but `LinIfChannelId` does not match `ComMChannelId`

#### Module version 5.1.0

2012-06-20

- ▶ Introduced post-build data structures

#### Module version 5.0.0

2012-03-16

- ▶ Initial AUTOSAR 4.0 version

- ▶ Updated naming scheme for #defines for symbolic name values to AUTOSAR 4.0 Rev 3 naming scheme
- ▶ Updated config to AUTOSAR 4.0 Rev 3 schema
- ▶ Added support of AUTOSAR 4.0 Rev 3 Lin MCAL module

### 3.3.1.2. New features

- ▶ LinIf is now fully compatible with Lin driver of ASR 4.3 and ASR 4.4.

### 3.3.1.3. EB-specific enhancements

This chapter lists the enhancements provided by the module.

- ▶ Configurable support of AUTOSAR 4.0 Rev 3, and 4.2 Lin MCAL Module

The configuration parameter `LinIfLinDriverAPI` allows to configure the LIN Interface module to support a specific Lin MCAL Module.

`LinIfLinDriverAPI`:

- ▶ Rev 2: Use Lin according to AUTOSAR Specification of LIN Driver V1.4.0 R4.0 Rev 2.
- ▶ Rev 3: Use Lin according to AUTOSAR Specification of LIN Driver V1.5.0 R4.0 Rev 3.
- ▶ 4.2: Use Lin according to AUTOSAR Specification of LIN Driver 4.2.1/4.2.2.
- ▶ 4.3.1: Use Lin according to AUTOSAR Specification of LIN Driver 4.3.1.
- ▶ 4.4: Use Lin according to AUTOSAR Specification of LIN Driver 4.4.0.

- ▶ Implementation of receive cancellation

Contrary to the AUTOSAR 4.0 Rev 3 specification, cancellation of ongoing receptions by a call to `LinTp_CancelReceive` is implemented.

- ▶ Callout for Lin bus error-handling

EB LinIf implements the two additional configuration parameters `LinIfLinErrorCalloutName` and `LinIfLinErrorCalloutHeaderFile` which enable LinIf to call a user-definable callout function in case of Lin bus communication errors.

- ▶ Vendor specific configuration parameters were introduced to support configurable reporting of the production errors "Bit-Error (`LINIF_E_TX_BIT_ERROR`) ", "Checksum-Error (`LINIF_E_RX_CHECKSUM_ERROR`) " and "Slave-Not-Responding-Error (`LINIF_E_RX_NO_RESPONSE_ERROR`) ".

Description:

Vendor specific configuration parameters `LinIfTxBitErrorReportToDem` , `LinIfTxBitErrorDemDetErrorId` , `LinIfTxBitErrorDebounceMethod` , `LinIfRxChecksumErrorRe-`

`portToDem` , `LinIfRxChecksumErrDemDetErrorId` , `LinIfRxChecksumDebounceMethod` , `LinIfRxNoRespErrorReportToDem` , `LinIfRxNoRespErrDemDetErrorId` and `LinIfRxNoRespDebounceMethod` , were introduced to support configurable reporting of the production errors above.

- ▶ Vendor specific configuration parameters: `LinIfScheduleTableEndNotificationSupported`, `LinIfScheduleTableEndNotificationCallout`, `LinIfScheduleTableEndNotificationRef` allow having custom end-of-schedule notifications.
- ▶ Added support referenceable `NULL_SCHEDULE` `LinIfScheduleTable`.
- ▶ Added support for forwarding the status from `Lin_GetStatus()` to the user callout.
- ▶ Added support for `Lin Confirmation Notification` and `LIN_RX_NO_RESPONSE` handling in the user callout.
- ▶ `LinIf` now supports referencing BSWMD for `Lin` driver/transceiver from which to extract the Vendor ID and Vendor API Infix.
- ▶ Added support for solving the inconsistency between the `LinIf` and `Lin` drivers with an autosar version lower than 4.3. (check [https://bugzilla.autosar.org/show\\_bug.cgi?id=73095](https://bugzilla.autosar.org/show_bug.cgi?id=73095)). If the `LinIf` channel starts in SLEEP, at initialization `LinIf` forces the driver channel into sleep. If calling `Lin_GoToSleepInternal()` returns `E_NOT_OK`, a DET is called. `LINIF_DRIVER_CHANNEL_NOT_IN_SLEEP` was chosen for this purpose with reserved ID `0xFF`.
- ▶ Added support for requesting the same schedule table. If the same schedule table is requested (as the one that is running) the schedule table will be restarted.

### 3.3.1.4. Deviations

This chapter lists the deviations of the module from the AUTOSAR standard.

- ▶ Physical reception is not aborted by functional transmission

Description:

If an ongoing physical reception is preempted by a functional transmission request, then the physical reception is suspended during processing of the functional transmission. After the functional transmission has been finished, the physical reception is resumed.

Rationale:

This behavior is implemented according to LIN Diagnostic Specification 2.1, chapter 5.4.4.1.

Requirements:

LINIF615

- ▶ `LinTp` does not provide the API function `LinTp_Shutdown()` (reference to product description: ASCPD-96)

Description:

The API function `LinTp_Shutdown()` is not implemented in the LinTp module.

Rationale:

There is no AUTOSAR internal user for the API function `LinTp_Shutdown()` and the behavior and operating constraints are not clearly specified in the AUTOSAR SWS. Using the function might be risky since expectations and actual behavior might differ, so it was decided to skip the function implementation.

Requirements:

LINIF355, LINIF356, LINIF433, LINIF357, LINIF482, LINIF484, LINIF683

- ▶ The `LinIf_Transmit()` function does not reject transmission requests of non-sporadic frames

Description:

If an upper layer requests to transmit an unconditional frame which is not associated to a sporadic frame slot, the function `LinIf_Transmit()` returns `E_OK`.

Rationale:

This deviation in behavior (i.e., the fact that the `LinIf_Transmit()` function does not reject transmission requests of non-sporadic frames) is required in order to support gateway operation. Because in gateway mode, the upper layer (i.e., the PduR) does not know about sporadic frames and calls `LinIf_Transmit()` unconditionally. If the `LinIf_Transmit()` returns `E_NOT_OK` in that case, unconditional frames might get lost. See [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=51794](http://www.autosar.org/bugzilla/show_bug.cgi?id=51794). AUTOSAR 4.1.1 [SWS\_LinIf\_00700]

Requirements:

LINIF341

- ▶ ASCCCB-1403: Initialization check in `LinIf_MainFunction()`

Description:

If `LinIf_MainFunction()` is called while the module is not yet initialized, `LinIf_MainFunction()` returns immediately without performing any functionality and without raising any Det error. This initialization check is always performed independent of the development error detection setting.

Rationale:

The SchM module may schedule the modules main function before the module is initialized. This would result in lots of Det errors during startup. Therefore the module's main function does not throw a Det error if the module is not yet initialized and simply returns in this case.

Requirements:

LINIF535

- The function `LinIf_CheckWakeup()` is reentrant only for different LIN channels

Description:

`LinIf_CheckWakeup()` cannot be interrupted by another `LinIf_CheckWakeup()` call.

Rationale:

`LinIf_CheckWakeup()` calls `Lin_CheckWakeup` which is non-reentrant, therefore `LinIf_CheckWakeup()` also needs to be non-reentrant.

Requirements:

LINIF378

- Call of `LinIf_ScheduleRequest()` within 100ms after `LinIf_Wakeup()` may lead to an unexpected behavior

Description:

If `LinIf_ScheduleRequest()` is called after `LinIf_Wakeup()` within 100ms, it could be that a slave neither receives data nor transmits a response.

Rationale:

After a wake-up signal is sent to a LIN cluster in sleep mode, the slaves may take up to 100ms before they can communicate. Only if the slaves are ready, the master shall start communication again (LIN Protocol Specification, Revision 2.0, Section 5.1). The LIN Interface does not enforce this delay, so if frames are sent immediately after the wake-up, slaves might miss them.

- Race conditions might lead to a wrong schedule table being active during sleep mode.

Description:

Issuing a schedule request (via `LinIf_ScheduleRequest()`) while the LinIf is performing the transition into sleep mode (due to a `LinIf_GotoSleep()` call) might cause the LinIf to end up in sleep mode with another schedule table than the NULL schedule being active due to internal race conditions. Note: If the LIN State Manager (LinSM) is used as upper layer for the LinIf (as designed by AUTOSAR) the module takes care that `LinIf_ScheduleRequest()` is not called during transition into sleep mode.

- ASCLINIF-579: Configuration parameter `LinIfFunctionId` has an extended range

Description:

The configuration parameter `LinIfFunctionId` has an extended range of 0-65535.

Rationale:

According to LIN Specification Package Revision 2.1 LIN function identifiers are 16-bit values. AUTOSAR 4.0 defines only a range of 0-255 for `LinIfFunctionId`. See [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=56273](http://www.autosar.org/bugzilla/show_bug.cgi?id=56273)

- ▶ Only one frame reference per schedule table entry supported

Description:

A schedule table entry does not allow configuration of more than one frame reference.

Requirements:

LINIF016\_Conf

- ▶ `LinIfChannelId` does not equal `ComMChannelId`

Description:

It is possible to configure `LinIfChannelId` with configuration parameter `LinIfMapComMChannelId-Direct`. If the parameter is set to `TRUE`, `LinIfChannelId` must be equal to `ComMChannelId`, otherwise mapping is performed between `ComMChannelId` and `LinIfChannelId`.

Rationale:

If other bus systems are used additionally to `LinIf`, the `ComM` channel ID must not necessarily be equal to the `LinIf` channel ID.

Requirements:

LINIF002\_Conf

- ▶ `LinIfClusterTimeBase` is not used

Description:

Configuration parameter `LinIfClusterTimeBase` is not used. Instead, the time base is derived from configuration parameter `LinIfTimeBase`.

Requirements:

LINIF006\_Conf

- ▶ The API function `LinIf_CancelTransmit()` is not supported (reference to product description ASCPD-24)

Description:

The API function `LinIf_CancelTransmit()` is not implemented.

Requirements:

LINIF580, LINIF649, LINIF581, LINIF594

- ▶ `LinTp_CancelTransmit()` always returns `E_NOT_OK`

Description:

If `LinTp_CancelTransmit()` is called and a transmission is ongoing, `BswM_LinTp_RequestMode()` with the parameter `LINTP_APPLICATIVE_SCHEDULE` is not called.

Rationale:

`LinTp_CancelTransmit()` is implemented as a dummy function and always returns `E_NOT_OK`.

Requirements:

LINIF645

- ▶ `LinIfPublicCddHeaderFile` parameter

Description:

The configuration parameter `LinIfPublicCddHeaderFile` besides CDDs is used for user defined end-of-schedule notifications as well.

Requirements:

`LinIf.ASR40.LINIF631_Conf`

- ▶ Deviating post-build implementation

Description:

The `PbcfgM` offers the opportunity to initialize the `LinIf` and `LinTp` with different configurations during run-time. Therefore it is possible to call `LinIf_Init()` and `LinTp_Init()` more than once.

Requirements:

LINIF562, LINIF593, LINIF376

- ▶ Development error code `LINIF_E_NC_NO_RESPONSE` is not reported

Description:

If a SRF is put in a schedule table after a node configuration frame and a slave does not answer the development error code, `LINIF_E_NC_NO_RESPONSE` is not reported if `Det` is enabled.

Requirements:

LINIF405, LINIF376

- ▶ No support of configuration parameter `LinIfNcOptionalRequestSupported` (reference to product description: ASCPD-61)

Description:

The configuration parameter `LinIfNcOptionalRequestSupported` is not supported. Node configuration frames cannot be disabled.

Rationale:

Configuration node frames are sent as fixed frames and they are not distinguished.

Requirements:

LINIF310

- ▶ No AUTOSAR Debugging support

Description:

`LinIf` is not instrumented for the usage with AUTOSAR Debugging.

Requirements:

LINIF515, LINIF516, LINIF517, LINIF518

- ▶ `LinTp` reception is not aborted if PDU with invalid data length is received

Description:

If a PDU is received with invalid data length, `PduR_LinTpRxIndication()` with the result `NTFRSLT_E_UNEXP_PDU` and `BswM_LinTp_RequestMode()` with the parameter `LINTP_APPLICATIVE_SCHEDULE` are not called to abort the reception. Instead the PDU is ignored.

Rationale:

Implementation according to LIN 2.1 Specification, otherwise SWS and LIN spec would be inconsistent. See [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=52375](http://www.autosar.org/bugzilla/show_bug.cgi?id=52375), AUTOSAR 4.1.1 [SWS\_LinIf\_00652]

Requirements:

LINIF614, LINIF654

- ▶ `LinTp` reception is not aborted if PDU with unexpected PCI is received

Description:

If a PDU is received with an unexpected PCI (CF is received instead of a FF or SF, or unknown PCI), `BswM_LinTp_RequestMode()` with the parameter `LINTP_APPLICATIVE_SCHEDULE` is not called to abort the reception. Instead the PDU is ignored.

Rationale:

Implementation according to LIN 2.1 Specification, otherwise SWS and LIN spec would be inconsistent. See [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=52375](http://www.autosar.org/bugzilla/show_bug.cgi?id=52375), AUTOSAR 4.1.1 [SWS\_LinIf\_00696] [SWS\_LinIf\_00697]

Requirements:

LINIF614

- Only post-build configuration is supported

Description:

The LinIf module only supports configuration variant `VARIANT-POST-BUILD`. `VARIANT-PRE-COMPILE` and `VARIANT-LINK-TIME` are not supported.

Requirements:

LINIF491, LINIF492, LINIF371, LINIF427

- Inter-module consistency checks are not supported

Description:

LinIf does not perform any inter-module consistency checks to avoid integration of incompatible files.

Rationale:

The module consistency check is not within the responsibility of the basic software, but part of the configuration management and delivery process.

Requirements:

LINIF383

- No macro for `LinIf_GetVersionInfo()`

Description:

`LinIf_GetVersionInfo()` is implemented as a C-function.

Requirements:

LINIF487

- Reception is aborted if `PduR_StartOfReception()` returns `BUFREQ_E_BUSY`

Description:

If `PduR_StartOfReception()` returns `BUFREQ_E_BUSY` and a buffer size smaller than the payload of the SF or FF, the LIN interface does not retry to copy data to PduR.

Rationale:

The LinTp does not support buffering of received data from the Lin driver.

Requirements:

#### LINIF679

- ▶ `LIN_E_RESPONSE` is reported to DET if `Lin_GetStatus` returns `LIN_TX_ERROR`

Description:

If the return code of the function `Lin_GetStatus` is `LIN_TX_ERROR` and any LIN frame transmission is attempted, `LINIF_E_RESPONSE` is reported if the development error detection is enabled.

Rationale:

According to [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=57634](http://www.autosar.org/bugzilla/show_bug.cgi?id=57634) and Autosar SWS 4.1 [SWS\_LinIf\_00036], a Det should be reported.

Requirements:

#### LINIF036

- ▶ `LinIf_Wakeup` shall return `E_NOT_OK` if LIN Interface has not been initialized, if the referenced channel does not exist (identification is out of range), or if the Driver function calls within return `E_NOT_OK`.

Description:

If the LIN Interface has not been initialized, `LinIf_Wakeup` shall return `E_NOT_OK`. If the referenced channel does not exist (identification is out of range), `LinIf_Wakeup` shall return `E_NOT_OK`. If the return code of the function `Lin_Wakeup` is `E_NOT_OK`, `LinIf_Wakeup` shall return `E_NOT_OK`. If the return code of the function `Lin_WakeupInternal` is `E_NOT_OK`, `LinIf_Wakeup` shall return `E_NOT_OK`.

Rationale:

According to Autosar SWS 4.2.1 [SWS\_LinIf\_00205] `LinIf_Wakeup` will not accept the request to wakeup due to one or more of the following reasons: - LIN Interface has not been initialized - referenced channel does not exist (identification is out of range) - `Lin_Wakeup` has returned `E_NOT_OK` - `Lin_WakeupInternal` has returned `E_NOT_OK`

Requirements:

#### LINIF205

- ▶ `LinIf_Wakeup` shall only call `Lin_Wakeup` if the channel state is `LINIF_CHANNEL_SLEEP` and the wake flag is not set.

Description:

The function `LinIf_Wakeup` shall call the function `Lin_Wakeup` of the LIN Driver module to transmit a wake-up request on the selected channel, if the channel is in the channel state `LINIF_CHANNEL_SLEEP` and the wakeup flag of the selected channel is not set.

Rationale:

According to Autosar SWS 4.2.1 [SWS\_LinIf\_00205] `LinIf_Wakeup` shall only call `Lin_Wakeup` on a certain channel, if both of the following conditions are true: - the channel is in the channel state `LINIF_CHANNEL_SLEEP` - the wakeup flag of the selected channel is not set

Requirements:

LINIF296

- ▶ `LinSM_GotoSleepConfirmation` shall be called with the parameter `TRUE` if a go-to-sleep command was send successfully or `Lin_GoToSleepInternal` was called.

Description:

When the go-to-sleep command was sent successful or the function `Lin_GoToSleepInternal` was called, the LIN Interface shall invoke the function `LinSM_GotoSleepConfirmation` with the parameter `TRUE`.

Rationale:

According to Autosar SWS 4.2.1 [SWS\_LinIf\_00205] `LinSM_GotoSleepConfirmation` shall be called with the parameter `TRUE` if one of the following reasons occur: - the go-to-sleep command was sent successful - the function `Lin_GoToSleepInternal` was called

Requirements:

LINIF557

- ▶ `LinTrcv.h` header inclusion

Description:

The `LinTrcv.h` header is included via the `LinIf_TrcvTypes.h` header, not directly in the main source file. Also, the name depends on the configuration parameters - `LinIfSingleLinTrcvAPIInfixEnable`- `LinIfMultipleTrcvDriverSupported` If any of the above parameters is set to `TRUE`, the naming is according to [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=53325](http://www.autosar.org/bugzilla/show_bug.cgi?id=53325) .

Requirements:

#### LINIF555

- ▶ Parameter type differs from specified

##### Description:

The configuration parameter `LinIfCddRef` isn't implemented as a having the type of a foreign reference but as a choice reference with values limited to [ `ECUC-MODULE-CONFIGURATION-VALUES` ].

##### Requirements:

#### LINIF637\_Conf

- ▶ Parameter existence criteria

##### Description:

The requirement from the SWS states that `LinIfCddRef` is only needed when `LinIfWakeupConfirmationUL`, `LinIfScheduleRequestConfirmationUL` and/or `LinIfGotoSleepConfirmationUL` is set to CDD. This enumeration is extended by `LinIfUserRxIndicationUL` and `LinIfUserTxUL`.

##### Requirements:

#### LINIF637\_Conf

- ▶ Parameter existence criteria

##### Description:

The requirement from the SWS list the `LinIfRxIndicationUL`, `LinIfTxConfirmationUL` and `LinIfTxTriggerTransmitUL` parameters as having the type `EcucFunctionNameDef`.

Due to the fact that parent container is PB, the type was changed to `EcucReferenceDef`.

##### Requirements:

#### ECUC\_LinIf\_00055

#### ECUC\_LinIf\_00054

#### ECUC\_LinIf\_00628

- ▶ Error reporting for bus mirroring

##### Description:

The requirement from the SWS states that when `LinIf_LinErrorIndication`, `LinIf_RxIndication` or `LinIf_TxConfirmation` is called, `LinIf` shall report to Mirror the error status code or the status code.

`LinIf_LinErrorIndication`, `LinIf_RxIndication` and `LinIf_TxConfirmation` are not supported and the status shall be sent to Mirror as `Lin_StatusType` parameter.

Requirements:

SWS\_LinIf\_00869

SWS\_LinIf\_00870

SWS\_LinIf\_00838

SWS\_LinIf\_00839

► Unexpected NAD during TP reception

Description:

The SWS states that when an incorrect NAD is received the reception shall be stopped and this should be reported through `PduR_LinTpRxIndication()` with the result `NTFRSLT_E_UNEXP_PDU`.

This applies only to consecutive frames.

Excerpt from LIN Spec 2.1 :

After reception of a Single Frame (SF) or First Frame (FF) PDU, with a NAD that is not equal to the functional NAD, during an ongoing message transmission the current reception shall be aborted. Reception of the new message shall be started on the receiver side if the NAD equals the node's own NAD or broadcast NAD.

Requirements:

LINIF613

LINIF655

► Behaviour for requesting the same run continuous table while it's running

Description:

The behaviour of `LinIf` for managing a request of a run continuous table that is currently running was updated to reflect the solution of AUTOSAR 4.4.0.

Excerpt from `LinIf` SWS AUTOSAR 4.4.0 :

It is possible to request the same schedule table again. In this case, the table is restarted.

Requirements:

LINIF444

LINIF028

LINIF495

### 3.3.1.5. Limitations

This chapter lists the limitations of the module. Refer to the module references chapter *Integration notes*, subsection *Integration requirements* for requirements on integrating this module.

► Limitation: Link time Cdd support

Description:

The configuration container LinIfChannel is post-build capable but the ConfigurationClass of upper layer Cdd support parameters is VARIANT-LINK-TIME.

Rationale:

The function pointers aren't generated within the post-build data structure (limitation).

It is considered to be the integrator's responsibility when modifying the LinIfChannel container to ensure that the set of references to LinSM, PduR or Cdds are identical to one present during LinkTime configuration.

Limitation: Compatibility with LinSM module

Description:

If used with a LinSM module from Elektrobit, the supported minimum LinSM version is 3.4.0.

Rationale:

APIs from earlier versions expect ComM, instead of LinIf handle IDs.

Limitation: Bus Mirroring number of channels

Description:

Maximum number of channels that are mirrored is 16

Rationale:

Implementation constraint from using uint16. In case of channel ID greater than the maximum mirrored channels, there will be an error reported to DET (error ID LINIF\_E\_INVALID\_MIRROR\_CHANNEL 0x70U).

Limitation: Drivers of different Autosar version

Description:

LinIf cannot use drivers of different Autosar version.

Rationale:

The configuration parameter LinIfLinDriverAPI specifies what version of Autosar the driver is expected to be. All other drivers of different Autosar versions are ignored.

Limitation: Slave behaviour not supported

Description:

LinIf cannot behave as a slave, as described in ASR 4.4.0.

Rationale:

Even though we are fully compatible with Lin driver of ASR 4.4.0, LinIf does not support the slave behaviour.

### 3.3.1.6. Open-source software

LinIf does not use open-source software.

## 3.3.2. LinSM module release notes

- ▶ AUTOSAR R4.0 Rev 3
- ▶ AUTOSAR SWS document version: 1.3.0
- ▶ Module version: 3.4.11.B337087
- ▶ Supplier: Elektrobit Automotive GmbH

### 3.3.2.1. Change log

This chapter lists the changes between different versions.

#### Module version 3.4.11

2020-06-19

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.10**

2020-05-22

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.9**

2020-03-25

- ▶ ASCLINSM-388 LinSM does not enter to correct state if WakeUp is requested and GoToSleep is under-going, or the other way around

#### **Module version 3.4.8**

2020-02-21

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.7**

2020-01-24

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.6**

2019-06-14

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.5**

2019-04-18

- ▶ Internal module improvement. This module version update does not affect module functionality.

#### **Module version 3.4.4**

2019-03-22

- ▶ Internal module improvement. This module version update does not affect module functionality

- ▶ ASCLINSM-377 Fixed known issue: A generation error occurs if LinSMScheduleIndex is configured with the value 0

#### **Module version 3.4.3**

2019-02-15

- ▶ ASCLINSM-374 Fixed known issue: LinSM generates a linker error if LinSMDevErrorDetect is disabled

#### **Module version 3.4.2**

2019-01-25

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.4.1**

2018-12-21

- ▶ ASCLINSM-369 Fixed known issue: Async server calls for bus indication are only generated for single channel
- ▶ ASCLINSM-370 Fixed known issue: Out-of-bounds access may occur for the array LinSM\_ChannelConfig

#### **Module version 3.4.0**

2018-10-26

- ▶ ASCLINSM-359 Fixed known issue: LinIf transceiver functionality does not translate the ComM channel to a LinIf channel
- ▶ Added multicore support.

#### **Module version 3.3.7**

2018-08-24

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.6**

2018-06-22

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.5**

2018-05-25

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.4**

2018-04-20

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.3**

2018-02-16

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.2**

2017-09-22

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.1**

2017-07-28

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.3.0**

2017-06-30

- ▶ LinSMScheduleIndex is now calculated by using the HandleIdWizard

#### **Module version 3.2.11**

2017-05-05

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.10**

2017-03-31

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.9**

2017-03-10

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.8**

2017-03-03

- ▶ Added Lin Transceiver support
- ▶ Move integration requirements to separate reqm file.

#### **Module version 3.2.7**

2017-01-05

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.6**

2016-11-04

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.5**

2016-05-25

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.2.4**

2016-02-05

- ▶ Added support for Debug & Trace with custom header file configurable via parameter `BaseDbgHeader-File`

### Module version 3.2.3

2015-11-06

- ▶ Internal module improvement. This module version update does not affect module functionality

### Module version 3.2.2

2015-06-19

- ▶ ASCLINSM-302 Fixed known issue: Configuration parameter `LinSMScheduleIndex` cannot be used

### Module version 3.2.1

2015-02-20

- ▶ ASCLINSM-290 Fixed known issue: LinSM may fail to schedule another Lin schedule table via `LinSM_ScheduleRequest()` when `LinSMConfirmationTimeout` is set to zero
- ▶ ASCLINSM-296 Fixed known issue: `LinSM_ScheduleRequest()` does not call `LinIf_ScheduleRequest()` if the requested run once schedule table is already running

### Module version 3.2.0

2014-10-03

- ▶ Changed the generation of symbolic name value macros for `LinSMScheduleIndex`. The macro now expands to the symbolic name value macro of the referenced `LinIfScheduleTableIndex`
- ▶ Updated LinSM module to store the requested communication mode and retry to reach it in case LinIf returns an error or does not confirm the request
- ▶ Removed obsolete legacy symbolic name values

### Module version 3.1.2

2013-10-11

- ▶ ASCLINSM-252 Fixed known issue: Value of variable `LinSM_GlobalState` is not reported to Dbg module

#### **Module version 3.1.1**

2013-06-14

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.1.0**

2013-02-08

- ▶ ASCLINSM-175 Fixed known issue: `LinSM_Version.h` defines incorrect values for the macros `LINSM_AR_MAJOR_VERSION`, `LINSM_AR_MINOR_VERSION`, `LINSM_AR_PATCH_VERSION`
- ▶ Updated reference paths of `LinSm-ComMChannel` reference for the introduction of `ComMConfigSet` container

#### **Module version 3.0.2**

2012-10-12

- ▶ Changed the top-level structure of the software-component description in the ARXML-files from `/AUTOSAR/LinSM` to `/AUTOSAR_LinSM`

#### **Module version 3.0.1**

2012-06-20

- ▶ Internal module improvement. This module version update does not affect module functionality

#### **Module version 3.0.0**

2012-03-16

- ▶ Initial AUTOSAR 4.0 version

### **3.3.2.2. New features**

- ▶ No new features have been added since the last release.

### **3.3.2.3. EB-specific enhancements**

This chapter lists the enhancements provided by the module.

- ▶ This module provides no EB-specific enhancements.

### 3.3.2.4. Deviations

This chapter lists the deviations of the module from the AUTOSAR standard.

- ▶ `#define` for symbolic name value `LinSMScheduleIndex` not according to AUTOSAR naming scheme

Description:

The name of `#defines` for the configuration parameter `LinSMScheduleIndex` does not correspond to the naming scheme for symbolic name values in the AUTOSAR document "Specification of ECU Configuration", item [ecuc\_sws\_2108].

The trailing part of the symbol name which [ecuc\_sws\_2108] defines as "shortName of the container which holds the configuration parameter value", is replaced by the `shortName` of the grandparent container. This is followed by an underscore which is followed by the `shortName` of the parent container.

For example, the symbol name is `LinSMConf_LinSMSchedule_LinSMChannel_0_LinSMSchedule_0` rather than `LinSMConf_LinSMSchedule_LinSMSchedule_0`.

Rationale:

This naming scheme is required to assure that symbolic name `#defines` according to item [ecuc\_sws\_2108] have a unique name (if default container names are used).

- ▶ Support of pre-compile time configuration only (reference to product description: ASCPD-77)

Description:

This LinSM module implements configuration variant 1: pre-compile time configuration.

Requirements:

LINSM0221

- ▶ `LinSM_Init()` accepts and ignores non-null pointer

Description:

Contrary to LINSM0218, `LinSM_Init()` does not check that the `ConfigPtr` argument is null.

Rationale:

Enable the EcuM module to initialize all modules in a uniform way (with a pointer to a default post-build configuration structure).

Requirements:

#### LINSM0218

- ▶ Reporting to DET if `LinSM_ScheduleRequest` is called incorrectly

##### Description:

Contrary to LINSM0211, `LinSM_ScheduleRequest` reports the vendor-specific error code `LINSM_E_NOT_IN_RUN_SCHEDULE` with the value `0x51` if the specified channel is not in the right substate.

##### Requirements:

#### LINSM0211

- ▶ Reporting of vendor-specific DET error codes on unexpected call of callback functions

##### Description:

The vendor-specific DET error code `LINSM_E_UNEXPECTED_CALLOUT` with the value `0x60` is signaled to the DET if the `LinIf` calls a confirmation function (`LinSM_WakeupConfirmation`, `LinSM_ScheduleRequestConfirmation` or `LinSM_GotoSleepConfirmation`) if the confirmation is not expected.

The `LinIf` is allowed to signal the activation of the `NULL_SCHEDULE` (e.g. at `LinIf` initialization or if going to sleep) via calling `LinSM_ScheduleRequestConfirmation` at any time. In this case, DET is not signaled.

- ▶ Initialization check in main function

##### Description:

If the main function is called while the module is not yet initialized, the main function returns immediately without performing any functionality and without raising any Det error. This initialization check is always performed independent of the development error detection setting.

##### Rationale:

The RTE may schedule the module's main function before the module is initialized. This would result in lots of Det errors during startup. Therefore the module's main function does not throw a Det error if the module is not yet initialized and simply returns in this case.

##### Requirements:

#### LINSM179

- ▶ LinSM does not check the versions of other modules

##### Description:

The LinSM does not check the version numbers of included header files from other modules. Therefore it partially deviates from LINSM209.

Rationale:

In general, the modules are delivered within a whole EB tresos AutoCore delivery, in which the versions are consistent and therefore do not have to be checked.

Furthermore, this allows the combination of the module with other AUTOSAR-compatible but not fully compliant modules. This might e.g., permit to combine the module with (adapted) modules from different AUTOSAR releases or with non-AUTOSAR modules that simulate the necessary behavior.

Requirements:

LINSM209

- LinSM\_Init does not set `NULL_SCHEDULE` for configured channels

Description:

Contrary to LINSM0216 the LinSM does not set the schedule type `NULL_SCHEDULE` for each configured channel.

Rationale:

This requirement is in contradiction to LINSM151. It is also not required because `LinIf_Init` sets the `NULL_SCHEDULE` for each configured channel anyway (see LINIF233).

Requirements:

LINSM0216

- Some API functions are not configurable

Description:

The callback functions `LinSM_WakeupConfirmation` and `LinSM_GotoSleepConfirmation` are not configurable and cannot be disabled.

Rationale:

In LinIf it cannot be configured if these functions are called or not. For further information see [http://www.autosar.org/bugzilla/show\\_bug.cgi?id=54715](http://www.autosar.org/bugzilla/show_bug.cgi?id=54715).

Requirements:

LINSM198, LINSM199

- ComM and BswM are only notified in case of mode change

Description:

The callback functions `ComM_BusSM_ModeIndication` and `BswM_LinSM_CurrentState` are only called in case the communication mode has actually changed. Thus it is not called if `LinSM_RequestComMode` returns `E_NOT_OK` or if the functions `LinSM_GotoSleepConfirmation` or `LinSM_WakeupConfirmation` are called with the argument *success=false*.

**Rationale:**

This is no functional limitation for the user and it improves the alignment to other state manager modules (FrSM, CanSM).

**Requirements:**

LINSM046, LINSM170, LINSM177, LINSM0202, LINSM0215

- Support of configuration variant pre-compile

**Description:**

Only the configuration variant pre-compile is supported. Variants link time and post-build are not supported.

**Requirements:**

LINSM003, LINSM0217

- No Debug & Trace support

**Description:**

LinSM is not instrumented for the usage with Debug & Trace.

**Requirements:**

LINSM184, LINSM185, LINSM186, LINSM187, LINSM188, LINSM189

- No checking of valid schedule table indices

**Description:**

`LinSM_ScheduleRequest` does not check if the schedule table indices are valid.

**Rationale:**

Configuration check already exists in LinIf. Also this check does not make sense since LinSM is a pre-compile module but the `LinIfScheduleIndex` is post-build changeable.

**Requirements:**

LINSM115

- Behavior of `LinSM_RequestComMode()` is changed to match ComM and other <Net>Sm modules.

**Description:**

`LinSM_RequestComMode()` silently ignores requests to ComM mode `SILENT_COM` and returns `E_OK`. `LinSM_RequestComMode()` returns `E_OK` on every call with valid parameters and tries to reach the requested mode no matter what the current state is. Also, it stores the requested mode in case `LinIf_Wakup` or `LinIf_GotoSleep` return `E_NOT_OK` and retries in the next main function, as specified in AUTOSAR 4.1 Rev 1.

**Rationale:**

Streamlines behavior for all `<Net>Sm` modules and thus makes special treatment of `LinSm` in ComM superfluous.

**Requirements:**

LINSM176, LINSM177, LINSM183, LINSM035, LINSM044, LINSM0210

### 3.3.2.5. Limitations

This chapter lists the limitations of the module. Refer to the module references chapter *Integration notes*, subsection *Integration requirements* for requirements on integrating this module.

- ▶ No `LinSMSchedule` container that refers to the `NULL_SCHEDULE` can be configured. Hence no corresponding symbolic name value `#define` for `LinSMScheduleIndex` can be generated

**Description:**

Configuration parameter `LinSMScheduleIndex` has `symbolicNameValue = true` and the AUTOSAR document "Specification of ECU Configuration" specifies that a corresponding `#define` shall be generated (item `[ecuc_sws_2108]`).

A `LinSMSchedule` container that references the `NULL_SCHEDULE` cannot be configured in the `LinSM` implementation.

Therefore it is also not possible to generate a corresponding `LinSMScheduleIndex` `#define` for a `LinSMSchedule` container that references the `NULL_SCHEDULE`.

**Rationale:**

The `NULL_SCHEDULE` is implicitly supported by `LinIf` and `LinSM` and cannot be referenced explicitly by a `LinSMSchedule` container.

Therefore, no `#define` can be generated for a configuration parameter `LinSMScheduleIndex` that refers to the `NULL_SCHEDULE`.

**Limitation:** Compatibility with `LinIf` module

Description:

If used with a LinIf module from Elektrobit, the supported minimum LinIf version is 5.8.0.

Rationale:

LinIf APIs from earlier versions expect ComM, instead of LinIf handle IDs.

### 3.3.2.6. Open-source software

LinSM does not use open-source software.

## 4. ACG8 LIN Stack user's guide

### 4.1. Overview

The ACG8 LIN Stack user's guide provides information about the concepts of the LIN stack in the AUTOSAR context. Before you read this user's guide, read the general concepts about communication stacks in AUTOSAR that are described in the EB tresos AutoCore Generic documentation.

- ▶ [Section 4.2, "Background information"](#) describes the concept of LIN communication in the AUTOSAR context.
- ▶ [Section 4.3, "LIN communication stack dependencies"](#) describes the LIN stack module dependencies that differ from the general communication stack module dependencies as described in the EB tresos AutoCore Generic documentation.

### 4.2. Background information

This chapter provides general information about the LIN communication concepts in the AUTOSAR context. If you are not familiar with the general concepts of communication in AUTOSAR, read the general information provided in the EB tresos AutoCore Generic documentation first.

#### 4.2.1. Communication in AUTOSAR LIN

In the LIN communication stack there is a one-to-one mapping between I/N-PDUs and L-PDUs (i.e. frames). This means each I/N-PDU is packed into exactly one LIN frame and each LIN frame carries exactly one I/N-PDU.

The schedule table managed by the `LinIf` module drives the transmission and reception of L-PDUs. This schedule table contains entries for:

- ▶ the transmission of LIN frames,
- ▶ the reception of LIN frames,
- ▶ and the issuing of transmission confirmations.

Each of these actions is assigned to a dedicated temporal offset from the start of the schedule table. The `LinIf` module's main function (`LinIf_MainFunction()`) drives the execution of the schedule table.

If the schedule table contains a transmission entry:

1. The `LinIf_MainFunction()` calls the `PduR_LinIfTriggerTransmit()` function, which queries the `PduR` for the data to be transmitted.
2. As soon as the `PduR` has provided the data (i.e. when `PduR_LinIfTriggerTransmit()` returns), the `LinIf` issues a call to the `Lin` module's function `Lin_SendFrame()` to transmit the data.
3. After the time for the transmission of the LIN frame on the bus has elapsed<sup>1</sup>, the `LinIf` calls the `Lin_GetStatus()` function.

This function returns the current transmission, reception or operation status of the LIN driver.

4. A positive transmission status obtained from the LIN driver is forwarded as a transmission confirmation (i.e., a call to `PduR_LinIfTxConfirmation()`) to the `PduR`.

If the schedule table contains a reception entry:

1. The `LinIf`'s schedule table contains an entry for calling the `Lin_GetStatus()` function. This function returns the current reception status of the LIN driver.
2. If an L-PDU has been received successfully, this function provides a pointer to the received data. This pointer is used as parameter to the call to `PduR_LinIfRxIndication()` to forward the received data to the `PduR`.

As far as different frame types defined by the LIN specification [1] are concerned, the `LinIf` module supports the transmission and the reception of the frame types:

- ▶ *unconditional frame*,
- ▶ *event triggered frame*,
- ▶ *sporadic frame*,

and the *diagnostic frames*

- ▶ *master request frame*
- ▶ and *slave response frame*.

Further information on the different frame types is available in [1].

Since there is no dedicated Transport Protocol module in the LIN communication stack, the `LinIf` takes care of this functionality as well. The protocol defined here is similar to the ISO Transport Protocol for CAN [2].

## 4.3. LIN communication stack dependencies

---

<sup>1</sup>This time depends on the transmission speed and the number of bytes to be transmitted.

This section describes issues in which the functionality and/or the module dependencies of the LIN communication stack modules differ from the description provided in the EB tresos AutoCore Generic documentation.

### 4.3.1. Module dependencies

The functionality of the LIN Transport Layer is integrated in the `LinIf` module. Thus, no separate `LinTp` module is available.

---

#### NOTE

#### **No `LinTp` plug-in is available for EB tresos AutoCore**

In EB tresos Studio, the `LinTp` plug-in is available to clearly separate the configuration of the LIN Transport Protocol from the other configuration of the `LinIf` module. EB tresos AutoCore however just contains a `LinIf` module, which provides both Interface as well as Transport Layer functionality (as specified by AUTOSAR).

---

## 5. ACG8 LIN Stack module references

### 5.1. Overview

This chapter provides module references for the ACG8 LIN Stack product modules. These include a detailed description of all configuration parameters. Furthermore this chapter lists the application programming interface with all data types, constants and functions.

The content of the sections is sorted alphabetically according the EB tresos AutoCore Generic module names.

For further information on the functional behavior of these modules, refer to the chapter ACG8 LIN Stack user's guide.

#### 5.1.1. Notation in EB module references

EB notation may differ from the AUTOSAR standard notation in the software specification documents (SWS). This section describes the notation of *default value* and *range* fields in the EB module references.

##### 5.1.1.1. Default value of configuration parameters

If there is no default value specified for a parameter, the default value field is omitted to prevent ambiguity with parameters that have -- as default values.

Example: The parameter `BswMCompuConstText` of the `BswM` module of EB tresos AutoCore Generic 8 Mode Management has no default value field, therefore it is omitted.

##### 5.1.1.2. Range information of configuration parameters

The range of a configuration parameter contains an upper and a lower boundary. However, in special cases the range of allowed values can be computed by means of an XPath function that is evaluated at configuration time. An XPath function can either be a standard `xpath:<function>()` or a custom `cxpath:<function>()` function. The range of a configuration parameter may be computed based on other configuration parameters that are referenced from the XPath function. For more information on custom XPath functions, see section *Custom XPath Functions API* of the EB tresos Studio developer's guide.

Example: The parameter `BswMCompuConstText` of the `BswM` module of EB tresos AutoCore Generic 8 Mode Management has the custom XPath function `cxpath:getCompuMethodsVT()` in the range field which provides the allowed values.

## 5.2. Linlf

### 5.2.1. Configuration parameters

#### 5.2.1.1. Linlf

Containers included		
Container name	Multiplicity	Description
<a href="#">CommonPublishedInformation</a>	1..1	<b>Label:</b> Common Published Information Common container, aggregated by all modules. It contains published information about vendor and versions.
<a href="#">LinlfGeneral</a>	1..1	Container that holds all LIN interface general parameters.
<a href="#">LinlfEbGeneral</a>	1..1	Container for EB specific common configurations.
<a href="#">LinlfGlobalConfig</a>	1..1	This container contains the global configuration parameters of the Linlf.  It is a MultipleConfigurationContainer, i.e. this container and its sub-containers exist once per configuration set.  Please note that only one configuration is supported.
<a href="#">LinlfDefensiveProgramming</a>	1..1	<b>Label:</b> Defensive Programming Options  Parameters for defensive programming
<a href="#">PublishedInformation</a>	1..1	<b>Label:</b> EB Published Information Additional published parameters not covered by Common-PublishedInformation container.

#### 5.2.1.1.4. LinIfCddFunctionsUL

Parameters included	
Parameter name	Multiplicity
<a href="#">CddName</a>	1..1
<a href="#">CddFunctionType</a>	1..1
<a href="#">CddFunctionName</a>	1..1

Parameter Name	CddName
<b>Description</b>	<p>Name of the Cdd.</p> <p>The list of possible choices is populated with the entries of LinIfPublicCddHeaderFile.</p>
<b>Multiplicity</b>	1..1
<b>Type</b>	ENUMERATION
<b>Range</b>	<pre>text:order(node.foreach(as:paths(as:modconf('Cdd') [node.exists(CddComStackContribution)]/../../), 'path', 'substring(\$path, 2)))</pre>
<b>Configuration class</b>	<b>VariantLinkTime:</b> VariantLinkTime
<b>Origin</b>	Elektrobit Automotive GmbH

Parameter Name	CddFunctionType
<b>Description</b>	Type of the function used in the PduR surrogate Cdd
<b>Multiplicity</b>	1..1
<b>Type</b>	ENUMERATION

<b>Default value</b>	RxIndication
<b>Range</b>	RxIndication
	TriggerTransmit
	TxConfirmation
<b>Configuration class</b>	<b>VariantLinkTime:</b> VariantLinkTime
<b>Origin</b>	Elektrobit Automotive GmbH

Parameter Name	CddFunctionName
<b>Description</b>	Function name (from the Cdd)  Can be calculated automatically if the Cdd and the Cdd Function Type are specified.
<b>Multiplicity</b>	1..1
<b>Type</b>	FUNCTION-NAME
<b>Configuration class</b>	<b>VariantLinkTime:</b> VariantLinkTime
<b>Origin</b>	Elektrobit Automotive GmbH

#### 5.2.1.1.5. LinIfScheduleTableEndNotificationCallout

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfScheduleTableEndNotificationCalloutName</a>	1..1

Parameter Name	LinIfScheduleTableEndNotificationCalloutName
<b>Description</b>	<p>Custom callout name invoked when the last entry of the schedule table is processed.</p> <p>Declaration is supplied within a <b>LinIfPublicCddHeaderFile</b> entry.</p> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>▶ <b>ROM increase (config):</b> Enabling this parameter increases the ROM consumption of the module configuration.</li> <li>▶ <b>ROM increase (code):</b> Enabling this parameter increases the ROM consumption of the module code.</li> <li>▶ <b>Execution time increase (code):</b> Enabling this parameter increases the execution time of the module code.</li> </ul>

<b>Multiplicity</b>	1..1
<b>Type</b>	FUNCTION-NAME
<b>Configuration class</b>	<b>VariantLinkTime:</b> VariantLinkTime
<b>Origin</b>	Elektrobit Automotive GmbH

#### 5.2.1.1.6. LinIfEbGeneral

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfEbGeneralBswmdImplementation</a>	0..1	Container for configuring multiple Lin Drivers/Transceivers to be used by the LinIf for determining the vendorId and vendorApiInfix of a specific driver/transceiver from the corresponding BSWMD. DISABLED = vendorId and vendorApiInfix of all Lin Drivers/Transceiver are determined via CommonPublishedInformation. ENABLED = vendorId and vendorApiInfix of configured Lin Drivers/Transceiver are determined via BSWMD and for not configured Lin Drivers/Transceiver via CommonPublishedInformation.

#### 5.2.1.1.7. LinIfEbGeneralBswmdImplementation

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfEbGeneralBswmdImplementationRefs</a>	1..n	<b>Label:</b> LinIfEbGeneralBswmdReferences  Container to configure a specific Lin Driver/Transceiver that shall indicate the vendorId and vendorApiInfix from its BSWMD.

#### 5.2.1.1.8. LinIfEbGeneralBswmdImplementationRefs

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfDrvTrcvRef</a>	1..1
<a href="#">LinIfDrvTrcvBswImplementationRef</a>	0..1

Parameter Name	LinIfDrvTrcvRef	
Description	Reference that points to the used Lin driver/transceiver.	
Multiplicity	1..1	
Type	CHOICE-REFERENCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfDrvTrcvBswImplementationRef	
Description	Reference to the BswImplementation of the underlying driver/transceiver which contains the vendorId and vendorApilnfix.	
Multiplicity	0..1	
Type	FOREIGN-REFERENCE	
Configuration class	VariantPreCompile:	VariantPreCompile
Origin	Elektrobit Automotive GmbH	

#### 5.2.1.1.9. LinIfGlobalConfig

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfChannel</a>	1..n	

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfTimeBase</a>	1..1

Parameter Name	LinIfTimeBase	
Description	The time-base for this channel in s (normally 0.002, 0.005 or 0.010s)	
Multiplicity	1..1	
Type	FLOAT	
Default value	0.005	
Range	<=0.255	
	>=0	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.10. LinIfChannel

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfFrame</a>	0..n	Generic container for all types of LIN frames. The shortName of this container is used as LinIfFrameName.
<a href="#">LinIfMaster</a>	1..1	Each Master can only be connected to one physical channel. This could be compared to the Node parameter in a LDF file.
<a href="#">LinIfScheduleTable</a>	1..n	Describes a schedule table. Each LinIfChannel may have several schedule tables. Each schedule table can only be connected to one channel.
<a href="#">LinIfSlave</a>	0..n	The Node attributes of the Slaves are provided with these parameter.  <b>This parameter is currently not used.</b>
<a href="#">LinIfTransceiverDrvConfig</a>	0..1	This container contains the configuration (parameters) of all addressed LIN transceivers by each underlying LIN Transceiver Driver.

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfChannelId</a>	1..1
<a href="#">LinIfCddRef</a>	0..1
<a href="#">LinIfChannelRef</a>	1..1
<a href="#">LinIfComMNetworkHandleRef</a>	1..1
<a href="#">LinIfGotoSleepConfirmationUL</a>	1..1
<a href="#">LinIfScheduleRequestConfirmationUL</a>	1..1
<a href="#">LinIfStartupState</a>	1..1
<a href="#">LinIfWakeupConfirmationUL</a>	1..1

Parameter Name	LinIfChannelId
Description	Implementation Type: NetworkHandleType
Multiplicity	1..1
Type	INTEGER
Default value	0
Range	<div>&lt;=255</div> <div>&gt;=0</div>

<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinIfCddRef</b>
<b>Description</b>	<p>EN: Reference to the CDD module description. This parameter is only required when LinIfWakeupConfirmationUL, LinIfScheduleRequestConfirmationUL, and/or LinIfGotoSleepConfirmationUL is set to CDD.</p> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>► <b>ROM increase (config):</b> Enabling this parameter increases the ROM consumption of the module configuration.</li> <li>► <b>ROM increase (code):</b> Enabling this parameter increases the ROM consumption of the module code.</li> </ul>
<b>Multiplicity</b>	0..1
<b>Type</b>	CHOICE-REFERENCE
<b>Range</b>	node:paths(/AUTOSAR/TOP-LEVEL-PACKAGES/*/ELEMENTS/Cdd[@type='MODULE-CONFIGURATION' and node:exists(CddComStackContribution)])
<b>Configuration class</b>	<b>PreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinIfChannelRef</b>
<b>Description</b>	Reference to the used channel in Lin.
<b>Multiplicity</b>	1..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinIfComMNetworkHandleRef</b>
<b>Description</b>	Unique handle to identify one certain LIN network. Reference to one of the network handles configured for the ComM.
<b>Multiplicity</b>	1..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

Parameter Name	LinIfGotoSleepConfirmationUL	
Description	<p>This parameter defines the upper layer (UL) module to which the confirmation of the goto-sleep command shall be sent.</p> <p><b>Must be used in conjunction with LinIfCddRef.</b></p>	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	LIN_SM	
Range	<p>CDD</p> <hr/> <p>LIN_SM</p>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfScheduleRequestConfirmationUL	
Description	<p>This parameter defines the upper layer (UL) module to which the confirmation of the successfully performed schedule table change.</p> <p><b>Must be used in conjunction with LinIfCddRef.</b></p>	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	LIN_SM	
Range	<p>CDD</p> <hr/> <p>LIN_SM</p>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfStartupState	
Description	Defines the state of each LIN channel after startup.	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	NORMAL	
Range	<p>NORMAL</p> <hr/> <p>SLEEP</p>	
Configuration class	VariantPostBuild:	VariantPostBuild

Origin	AUTOSAR_ECUC	
--------	--------------	--

  

Parameter Name	LinIfWakeupConfirmationUL	
Description	<p>This parameter defines the upper layer (UL) module to which the confirmation of the wake-up shall be sent.</p> <p><b>Must be used in conjunction with LinIfCddRef.</b></p>	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	LIN_SM	
Range	CDD	
	LIN_SM	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.11. LinIfFrame

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfFixedFrameSdu</a>	1..1	<p>In case this is a fixed frame this is the SDU (response). This container represent an eight byte array. The Byte order shall be MSB first.</p> <p>This container is only available for the following LinIfFrame-Types:</p> <ul style="list-style-type: none"> <li>▶ ASSIGN</li> <li>▶ ASSIGN_FRAME_ID_RANGE</li> <li>▶ ASSIGN_NAD</li> <li>▶ CONDITIONAL</li> <li>▶ FREE</li> <li>▶ SAVE_CONFIGURATION</li> <li>▶ UNASSIGN</li> </ul>
<a href="#">LinIfPduDirection</a>	1..1	Direction of the frame.
<a href="#">LinIfSubstitutionFrames</a>	0..n	List of unconditional Frames that can be sent in a sporadic Frame slot.

Containers included		
<a href="#">LinIfFrameDemEventParameterRefs</a>	0..1	Container for the references to DemEventParameter elements which shall be invoked using the Dem_ReportErrorStatus API in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId value. The standardized errors are provided in the container and can be extended by vendor specific error references.

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfChecksumType</a>	1..1
<a href="#">LinIfFrameType</a>	1..1
<a href="#">LinIfLength</a>	1..1
<a href="#">LinIfPid</a>	1..1

Parameter Name	LinIfChecksumType	
Description	Type of checksum that the frame is using.	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	CLASSIC	
Range	CLASSIC	
	ENHANCED	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfFrameType	
Description	Type of frame that is described (e.g. sporadic frame). Note that types 7-11 are the fixed MRF types.  The sporadic slot is not found among the frame types. A sporadic slot is a set of sporadic frames.	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	UNCONDITIONAL	
Range	ASSIGN	

	ASSIGN_FRAME_ID_RANGE
	ASSIGN_NAD
	CONDITIONAL
	EVENT_TRIGGERED
	FREE
	MRF
	SAVE_CONFIGURATION
	SPORADIC
	SRF
	UNASSIGN
	UNCONDITIONAL
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

Parameter Name	LinIfLength
<b>Description</b>	Length of the LIN SDU in bytes.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Default value</b>	8
<b>Range</b>	<=8
	>=1
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

Parameter Name	LinIfPid
<b>Description</b>	Protected ID of the LIN frame. There is no reason to calculate the Parity in run-time.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Default value</b>	0
<b>Range</b>	<=255
	>=0
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild

Origin	AUTOSAR_ECUC
--------	--------------

#### 5.2.1.1.12. LinIfFixedFrameSdu

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfFixedFrameSduByte</a>	8..8	This container represents a byte within the 8 byte array. The Byte order shall be MSB first.

#### 5.2.1.1.13. LinIfFixedFrameSduByte

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfFixedFrameSduBytePos</a>	1..1
<a href="#">LinIfFixedFrameSduByteVal</a>	1..1

Parameter Name	LinIfFixedFrameSduBytePos	
Description	Index of the Byte in the SDU (response) 8 byte array.	
Multiplicity	1..1	
Type	INTEGER	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfFixedFrameSduByteVal	
Description	Byte value in the SDU (response) 8-byte array.	
Multiplicity	1..1	
Type	INTEGER	
Default value	0	
Range	<=255	
	>=0	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.14. LinIfPduDirection

Containers included		
Container name	Multiplicity	Description
<a href="#">LinIfInternalPdu</a>	1..1	Represents a Diagnostic or Configuration frame : no Message ID (no PduId).
<a href="#">LinIfRxPdu</a>	1..1	Represents a received PDU/frame.
<a href="#">LinIfSlaveToSlavePdu</a>	1..1	Represents a slave-to-slave PDU/frame. Master does only send the header but doesn't receive the response.  Added for completeness.
<a href="#">LinIfTxPdu</a>	1..1	Represents a transmitted PDU/frame.

#### 5.2.1.1.15. LinIfInternalPdu

#### 5.2.1.1.16. LinIfRxPdu

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfRxIndicationUL</a>	0..1
<a href="#">LinIfRxPduRef</a>	1..1
<a href="#">LinIfUserRxIndicationUL</a>	1..1

Parameter Name	LinIfRxIndicationUL
Description	<p>This parameter refers to the defined name of the <code>User_RxIndication</code>.</p> <p>This parameter depends on the parameter <code>LinIfUserRxIndicationUL</code>.</p> <p>If <code>LinIfUserRxIndicationUL</code> equals CDD the name of the <code>User_RxIndication</code> is selectable.</p> <p>The name is defined in <code>LinIfGeneral/LinIfCddFunctionsUL</code>.</p>
Multiplicity	0..1
Type	ENUMERATION
Range	text:order(..../..../..../..../..../..../LinIfGeneral/LinIfCddFunctionsUL/*[CddFunctionType='RxIndication']/@name)
Configuration class	<div>PostBuild:</div> <div>VariantPostBuild</div>

Origin	AUTOSAR_ECUC
--------	--------------

Parameter Name	LinIfRxPduRef	
Description	Reference to the PDU that is received in this frame.	
Multiplicity	1..1	
Type	REFERENCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfUserRxIndicationUL	
Description	<p>This parameter defines the upper layer (UL) module to which the indication of the successfully received LINRXPDUID has to be routed via <code>User_LinIfRxIndication</code>.</p> <p>This <code>User_LinIfRxIndication</code> has to be invoked when the indication of the configured LINRXPDUID will be received by a Rx indication event from the LIN Driver module.</p>	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	PDUR	
Range	CDD PDUR	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.17. LinIfSlaveToSlavePdu

#### 5.2.1.1.18. LinIfTxPdu

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfTxConfirmationUL</a>	0..1
<a href="#">LinIfTxPduId</a>	1..1
<a href="#">LinIfTxPduRef</a>	1..1

Parameters included	
<a href="#">LinIfTxTriggerTransmitUL</a>	0..1
<a href="#">LinIfUserTxUL</a>	1..1

Parameter Name	LinIfTxConfirmationUL	
Description	<p>This parameter refers to the defined name of the <code>User_TxConfirmation</code>.</p> <p>This parameter depends on the parameter <code>LinIfUserTxUL</code>.</p> <p>If <code>LinIfUserTxUL</code> equals CDD, the name of the <code>User_TxConfirmation</code> is selectable.</p> <p>The name is defined in <code>LinIfGeneral/LinIfCddFunctionsUL</code>.</p>	
Multiplicity	0..1	
Type	ENUMERATION	
Range	text:order{../../../../../LinIfGeneral/LinIfCddFunctionsUL/*[CddFunctionType='TxConfirmation']/@name}	
Configuration class	PostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfTxPduld	
Description	<p>Identifier of the frame for the upper layer.</p> <p>This id is only relevant for sporadic frames.</p>	
Multiplicity	1..1	
Type	INTEGER	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfTxPduRef	
Description	Reference to the PDU that is transmitted in this frame.	
Multiplicity	1..1	
Type	REFERENCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfTxTriggerTransmitUL	
Description	This parameter refers to the defined name of the <code>User_TriggerTransmit</code> .	

	<p>This parameter depends on the parameter LinIfUserTxUL.</p> <p>If LinIfUserTxUL equals CDD, the name of the <code>User_TriggerTransmit</code> is selectable.</p> <p>The name is defined in LinIfGeneral/LinIfCddFunctionsUL.</p>	
<b>Multiplicity</b>	0..1	
<b>Type</b>	ENUMERATION	
<b>Range</b>	text:order(..../LinIfGeneral/LinIfCddFunctionsUL/*[CddFunctionType='TriggerTransmit']/@name)	
<b>Configuration class</b>	<b>PostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinIfUserTxUL</b>	
<b>Description</b>	<p>This parameter defines the upper layer (UL) module to which the trigger of the transmitted LinTxPdu (via the <code>User_TriggerTransmit</code>) or the confirmation of the successfully transmitted LinTxPdu has to be routed (via the <code>User_TxConfirmation</code>).</p>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	ENUMERATION	
<b>Default value</b>	PDUR	
<b>Range</b>	<p>CDD</p> <hr/> <p>PDUR</p>	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

#### 5.2.1.1.19. LinIfSubstitutionFrames

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfFramePriority</a>	1..1
<a href="#">LinIfSubstitutionFrameRef</a>	1..1

<b>Parameter Name</b>	<b>LinIfFramePriority</b>
<b>Description</b>	<p>Priority of an unconditional frame if used as a sporadic frame or in case of collision resolving of event triggered frames (0 is the highest priority, 255 the lowest).</p>

<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

  

<b>Parameter Name</b>	<b>LinIfSubstitutionFrameRef</b>
<b>Description</b>	Reference to an unconditional Frame that can be sent in a sporadic Frame slot.
<b>Multiplicity</b>	1..1
<b>Type</b>	REFERENCE
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

#### 5.2.1.1.20. LinIfFrameDemEventParameterRefs

Parameters included	
Parameter name	Multiplicity
<a href="#">LINIF_E_TX_BIT_ERROR</a>	0..1
<a href="#">LINIF_E_RX_CHECKSUM_ERROR</a>	0..1
<a href="#">LINIF_E_RX_NO_RESPONSE_ERROR</a>	0..1

<b>Parameter Name</b>	<b>LINIF_E_TX_BIT_ERROR</b>
<b>Description</b>	<p>Reference to the DemEventParameter that shall be issued when the LIN Driver reports a bit error to LinIf.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ <code>LinIfTxBitErrorReportToDem</code>: Select DEM to enable the reporting of <code>LINIF_E_TX_BIT_ERROR</code>.</li> </ul> <p>Further notes:</p> <ul style="list-style-type: none"> <li>▶ Activation: This error is reported if a bit error is detected.</li> <li>▶ Healing: This error is healed as soon as no bit error is detected.</li> <li>▶ Trigger debounce: None. The error is reported on first occurrence.</li> <li>▶ Rate of diagnostic checks: Checked on every <code>LinIf_MainFunction()</code> call.</li> </ul>
<b>Multiplicity</b>	0..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE

<b>Origin</b>	Elektrobit Automotive GmbH
---------------	----------------------------

<b>Parameter Name</b>	<b>LINIF_E_RX_CHECKSUM_ERROR</b>
<b>Description</b>	<p>Reference to the DemEventParameter that shall be issued when the LIN Driver reports a checksum error to LinIf.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ LinIfRxChecksumErrorReportToDem: Select DEM to enable the reporting of LINIF_E_RX_CHECKSUM_ERROR.</li> </ul> <p>Further notes:</p> <ul style="list-style-type: none"> <li>▶ Activation: This error is reported if a checksum error is detected.</li> <li>▶ Healing: This error is healed as soon as no checksum error is detected.</li> <li>▶ Trigger debounce: None. The error is reported on first occurrence.</li> <li>▶ Rate of diagnostic checks: Checked on every LinIf_MainFunction() call.</li> </ul>
<b>Multiplicity</b>	0..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LINIF_E_RX_NO_RESPONSE_ERROR</b>
<b>Description</b>	<p>Reference to the DemEventParameter that shall be issued when the LIN Driver reports a slave not responding error to LinIf.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ LinIfRxNoRespErrorReportToDem: Select DEM to enable the reporting of LINIF_E_RX_NO_RESPONSE_ERROR.</li> </ul> <p>Further notes:</p> <ul style="list-style-type: none"> <li>▶ Activation: This error is reported if a slave not responding error is detected.</li> <li>▶ Healing: This error is healed as soon as no slave not responding error is detected.</li> <li>▶ Trigger debounce: None. The error is reported on first occurrence.</li> <li>▶ Rate of diagnostic checks: Checked on every LinIf_MainFunction() call.</li> </ul>
<b>Multiplicity</b>	0..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Origin</b>	Elektrobit Automotive GmbH

#### 5.2.1.1.21. LinIfMaster

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfClusterTimeBase</a>	1..1
<a href="#">LinIfJitter</a>	1..1

Parameter Name	LinIfClusterTimeBase	
Description	<p>Defines a time-base for one LIN cluster in seconds (normally 0.002, 0.005 or 0.-010s).</p> <p><b>This parameter is currently not used.</b></p>	
Multiplicity	1..1	
Type	FLOAT	
Default value	0.010	
Range	<div> <div>&lt;=0.255</div> <div>&gt;=0</div> </div>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfJitter	
Description	<p>The jitter specifies the differences between the maximum and minimum delay from time base tick to the header sending start point in seconds.</p>	
Multiplicity	1..1	
Type	FLOAT	
Default value	0	
Range	<div> <div>&lt;=0.255</div> <div>&gt;=0</div> </div>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.22. LinIfScheduleTable

Containers included		
Container name	Multiplicity	Description

Containers included		
<a href="#">LinIfEntry</a>	0..n	Describes an entry in the schedule table (also known as Frame Slot).

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfResumePosition</a>	1..1
<a href="#">LinIfRunMode</a>	1..1
<a href="#">LinIfScheduleMode</a>	1..1
<a href="#">LinIfScheduleTableIndex</a>	1..1
<a href="#">LinIfScheduleTableName</a>	0..1
<a href="#">LinIfScheduleTableEndNotificationRef</a>	0..1

Parameter Name	LinIfResumePosition	
Description	Defines, where a schedule table shall be proceeded in case if it has been interrupted by a run-once table or MRF/SRF.	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	START_FROM_BEGINNING	
Range	CONTINUE_AT_IT_POINT	
	START_FROM_BEGINNING	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfRunMode	
Description	The schedule table can be executed in two different modes.	
Multiplicity	1..1	
Type	ENUMERATION	
Default value	RUN_CONTINUOUS	
Range	RUN_CONTINUOUS	
	RUN_ONCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfScheduleMode
Description	<p>The schedule table can be executed in the following three different modes:</p> <ul style="list-style-type: none"> <li>▶ <b>LINTP_APPLICATIVE_SCHEDULE</b>: Applicative schedule is selected</li> <li>▶ <b>LINTP_DIAG_REQUEST</b>: Master request schedule table is selected</li> <li>▶ <b>LINTP_DIAG_RESPONSE</b>: Slave response schedule table is selected</li> </ul> <p><b>This parameter is currently not used.</b></p>
Multiplicity	1..1
Type	ENUMERATION
Default value	LINTP_APPLICATIVE_SCHEDULE
Range	LINTP_APPLICATIVE_SCHEDULE LINTP_DIAG_REQUEST LINTP_DIAG_RESPONSE
Configuration class	VariantPostBuild: VariantPostBuild
Origin	AUTOSAR_ECUC

Parameter Name	LinIfScheduleTableIndex
Description	<p>This is the unique index used by upper layers to identify a schedule.</p> <p>Note that the NULL_SCHEDULE for each channel has index 0.</p> <p>Please also note the following rules for setting the schedule table index:</p> <ul style="list-style-type: none"> <li>▶ The indices for the schedule tables of each channel must start with 1 and be consecutive.</li> <li>▶ Each index must be unique within a channel.</li> <li>▶ The indices of each table must be ordered according to the priority of the schedule tables (parameter LinIfSchedulePriority).</li> <li>▶ The indices of RUN_ONCE tables must be lower than those of RUN_CONTINUOUS tables (parameter LinIfRunMode).</li> </ul>
Multiplicity	1..1
Type	INTEGER
Configuration class	VariantPostBuild: VariantPostBuild
Origin	AUTOSAR_ECUC

Parameter Name	LinIfScheduleTableName
Description	Optional schedule name used to cross-reference with a LDF.

	LIN_IF_SCHEDULE_INDEX shall be part of the schedule name.  <b>This parameter is currently not used.</b>	
<b>Multiplicity</b>	0..1	
<b>Type</b>	STRING	
<b>Configuration class</b>	<b>PostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinIfScheduleTableEndNotificationRef</b>	
<b>Description</b>	<p>Reference to a custom callout name invoked when the last entry of the schedule table is processed.</p> <p>The callout name is specified in <b>LinIfScheduleTableEndNotificationCallout/LinIfScheduleTableEndNotificationCalloutName</b></p> <p>Declaration is supplied within a <b>LinIfPublicCddHeaderFile</b> entry.</p> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>▶ <b>ROM increase (config):</b> Enabling this parameter increases the ROM consumption of the module configuration.</li> <li>▶ <b>ROM increase (code):</b> Enabling this parameter increases the ROM consumption of the module code.</li> <li>▶ <b>Execution time increase (code):</b> Enabling this parameter increases the execution time of the module code.</li> </ul>	
<b>Multiplicity</b>	0..1	
<b>Type</b>	REFERENCE	
<b>Configuration class</b>	<b>PostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

#### 5.2.1.1.23. LinIfEntry

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfCollisionResolvingRef</a>	0..1
<a href="#">LinIfDelay</a>	1..1
<a href="#">LinIfEntryIndex</a>	1..1
<a href="#">LinIfFrameRef</a>	1..1

Parameter Name	LinIfCollisionResolvingRef	
Description	Reference to the schedule table, which resolves the collision.	
Multiplicity	0..1	
Type	REFERENCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfDelay	
Description	Delay to next entry in schedule table in seconds.	
Multiplicity	1..1	
Type	FLOAT	
Default value	0.02	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfEntryIndex	
Description	Position of the Frame Entry in the Schedule Table. The first entry index in the schedule table is 0.	
Multiplicity	1..1	
Type	INTEGER	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfFrameRef	
Description	Reference to the frames that belong to this schedule table entry.	
Multiplicity	1..1	
Type	REFERENCE	
Configuration class	PostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.24. LinIfSlave

Parameters included	
Parameter name	Multiplicity

Parameters included	
<a href="#">LinIfConfiguredNad</a>	1..1
<a href="#">LinIfFunctionId</a>	1..1
<a href="#">LinIfProtocolVersion</a>	1..1
<a href="#">LinIfSupplierId</a>	1..1
<a href="#">LinIfVariant</a>	1..1

Parameter Name	LinIfConfiguredNad	
Description	Definition of the initial node address.  <b>This parameter is currently not used.</b>	
Multiplicity	1..1	
Type	INTEGER	
Range	<div>&lt;=255</div> <div>&gt;=1</div>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfFunctionId	
Description	LIN function ID.  <b>This parameter is currently not used.</b>	
Multiplicity	1..1	
Type	INTEGER	
Default value	0	
Range	<div>&lt;=65535</div> <div>&gt;=0</div>	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfProtocolVersion	
Description	Defines the LIN Protocol version which is used by the slave.  <b>This parameter is currently not used.</b>	
Multiplicity	1..1	
Type	STRING	

Default value	2.1	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfSupplierId	
Description	LIN Supplier ID.  <b>This parameter is currently not used.</b>	
Multiplicity	1..1	
Type	INTEGER	
Default value	0	
Range	<=32767	
	>=0	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinIfVariant	
Description	Specifies the Variant ID.  <b>This parameter is currently not used.</b>	
Multiplicity	1..1	
Type	INTEGER	
Default value	0	
Range	<=255	
	>=0	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.1.25. LinIfTransceiverDrvConfig

Parameters included		
Parameter name	Multiplicity	
<a href="#">LinIfTrcvIdRef</a>	1..1	
Parameter Name	LinIfTrcvIdRef	

<b>Description</b>	Logical handle of the underlying LIN transceiver to be served by the LIN Interface.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	SYMBOLIC-NAME-REFERENCE	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

#### 5.2.1.1.26. LinIfDefensiveProgramming

Parameters included	
Parameter name	Multiplicity
<a href="#">LinIfDefProgEnabled</a>	1..1
<a href="#">LinIfPrecondAssertEnabled</a>	1..1
<a href="#">LinIfPostcondAssertEnabled</a>	1..1
<a href="#">LinIfStaticAssertEnabled</a>	1..1
<a href="#">LinIfUnreachAssertEnabled</a>	1..1
<a href="#">LinIfInvariantAssertEnabled</a>	1..1

Parameter Name	LinIfDefProgEnabled
<b>Label</b>	Enable Defensive Programming
<b>Description</b>	<p>Enables or disables the defensive programming feature for the module LinIf.</p> <p>Note: This feature is dependent on the use of the development error detection module. To use the defensive programming feature, proceed as follows:</p> <ol style="list-style-type: none"> <li>1. Enable development error detection</li> <li>2. Enable defensive programming</li> <li>3. Enable assertions as required</li> </ol>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH

Parameter Name	LinIfPrecondAssertEnabled
----------------	---------------------------

<b>Label</b>	Enable Precondition Assertions	
<b>Description</b>	<p>Enables handling of precondition assertion checks reported from the module LinIf.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinIfDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinIfDefProgEnabled</code>): must be enabled</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>LinIfPostcondAssertEnabled</b>	
<b>Label</b>	Enable Postcondition Assertions	
<b>Description</b>	<p>Enables handling of postcondition assertion checks reported from the module LinIf.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinIfDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinIfDefProgEnabled</code>): must be enabled</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>LinIfStaticAssertEnabled</b>	
<b>Label</b>	Enable Static Assertions	
<b>Description</b>	<p>Enables handling of static assertion checks reported from the module LinIf.</p> <p>Dependency on parameter(s):</p>	

	<ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinIfDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinIfDefProgEnabled</code>): must be enabled</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>LinIfUnreachAssertEnabled</b>	
<b>Label</b>	Enable Unreachable Code Assertions	
<b>Description</b>	<p>Enables handling of unreachable code assertion checks reported from the module <code>LinIf</code>.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinIfDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinIfDefProgEnabled</code>): must be enabled</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>LinIfInvariantAssertEnabled</b>	
<b>Label</b>	Enable Invariant Assertions	
<b>Description</b>	<p>Enables handling of invariant assertion checks reported from functions of the module <code>LinIf</code>.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinIfDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinIfDefProgEnabled</code>): must be enabled</li> </ul>	

<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH

#### 5.2.1.1.27. PublishedInformation

Parameters included	
Parameter name	Multiplicity
<a href="#">PbcfgMSupport</a>	1..1

<b>Parameter Name</b>	<b>PbcfgMSupport</b>
<b>Label</b>	PbcfgM support
<b>Description</b>	Specifies whether or not the LinIf can use the PbcfgM module for post-build support.
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	true
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

#### 5.2.1.2. LinTp

Containers included		
Container name	Multiplicity	Description
<a href="#">LinTpGeneral</a>	1..1	Container that holds all LIN transport protocol general parameters.
<a href="#">LinTpGlobalConfig</a>	1..1	<p>This container contains the global configuration parameter of the LinTp.</p> <p>It is a MultipleConfigurationContainer, i.e. this container and its sub-containers exist once per configuration set.</p>

Containers included		
<a href="#">CommonPublishedInformation</a>	1..1	<b>Label:</b> Common Published Information Common container, aggregated by all modules. It contains published information about vendor and versions.
<a href="#">PublishedInformation</a>	1..1	<b>Label:</b> EB Published Information Additional published parameters not covered by Common-PublishedInformation container.

Parameters included	
Parameter name	Multiplicity
<a href="#">IMPLEMENTATION_CONFIG_VARIANT</a>	1..1

Parameter Name	IMPLEMENTATION_CONFIG_VARIANT
<b>Label</b>	Config Variant
<b>Multiplicity</b>	1..1
<b>Type</b>	ENUMERATION
<b>Default value</b>	VariantPostBuild
<b>Range</b>	VariantPostBuild

#### 5.2.1.2.1. LinTpGeneral

Parameters included	
Parameter name	Multiplicity
<a href="#">LinTpVersionInfoApi</a>	1..1
<a href="#">LinTpRelocatablePbcfgEnable</a>	1..1
<a href="#">LinTpScheduleChangeDiagApiEnable</a>	1..1

Parameter Name	LinTpVersionInfoApi
<b>Description</b>	Switch to enable/disable the API function <code>LinTp_GetVersionInfo()</code> to read out the module's version information.  <ul style="list-style-type: none"> <li>▶ <code>true</code>: Version info API enabled.</li> <li>▶ <code>false</code>: Version info API disabled.</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false

<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpRelocatablePbcfgEnable</b>	
<b>Description</b>	<p>Enables/disable support for relocatable postbuild configuration.</p> <ul style="list-style-type: none"> <li>▶ True: Postbuild configuration relocatable in memory.</li> <li>▶ False: Postbuild configuration not relocatable in memory.</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	true	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>LinTpScheduleChangeDiagApiEnable</b>	
<b>Description</b>	<p>Switches BswM_LinTp_RequestMode API on and off. If turned on diagnostic schedules are requested from the BSwM automatically. This configuration parameter can only be turned of if LinTpScheduleChangeDiag is disabled in every LinTpChannelConfig.</p> <ul style="list-style-type: none"> <li>▶ true: Enables change diagnostic schedule mode API.</li> <li>▶ false: Disables change diagnostic schedule mode API.</li> </ul> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>▶ <b>ROM reduction (code):</b> Disabling this parameter reduces the ROM consumption of the module code.</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	true	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

#### 5.2.1.2.2. LinTpGlobalConfig

Containers included		
Container name	Multiplicity	Description

Containers included		
<a href="#">LinTpChannelConfig</a>	0..n	This container contains the channel specific configuration parameter of LinTp.
<a href="#">LinTpRxNSdu</a>	0..n	Container for each received N-SDU on any channel the node is connected to.
<a href="#">LinTpTxNSdu</a>	0..n	Container for each transmitted N-SDU on any channel the node is connected to.

Parameters included	
Parameter name	Multiplicity
<a href="#">LinTpMaxNumberOfRespPendingFrames</a>	1..1
<a href="#">LinTpNumberOfRxNSdu</a>	1..1
<a href="#">LinTpNumberOfTxNSdu</a>	1..1
<a href="#">LinTpP2Max</a>	1..1
<a href="#">LinTpP2Timing</a>	1..1

Parameter Name	LinTpMaxNumberOfRespPendingFrames	
Description	Configures the maximum number of allowed response pending frames.	
Multiplicity	1..1	
Type	INTEGER	
Default value	8	
Range	<=65534	
	>=0	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinTpNumberOfRxNSdu	
Description	<b>This configuration parameter is not used.</b> Number of transport protocol messages that can be received for all channels this node is connected to.	
Multiplicity	1..1	
Type	INTEGER	
Default value	0	
Range	<=65535	
	>=0	

<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpNumberOfTxNSdu</b>	
<b>Description</b>	<b>This configuration parameter is not used.</b> Number of transport protocol messages that can be transmitted for all channels this node is connected to.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER	
<b>Default value</b>	0	
<b>Range</b>	<=65535	
	>=0	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpP2Max</b>	
<b>Description</b>	P2 Timeout when a response pending frame is expected in seconds.  <b>Note: A value of 0.0 disables this timeout.</b>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	FLOAT	
<b>Default value</b>	2	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpP2Timing</b>	
<b>Description</b>	Definition of the P2 timeout observation parameter in seconds.  <b>Note: A value of 0.0 disables this timeout.</b>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	FLOAT	
<b>Default value</b>	0.5	
<b>Range</b>	<=0.5	
	>=0.05	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

#### 5.2.1.2.3. LinTpChannelConfig

Parameters included	
Parameter name	Multiplicity
<a href="#">LinTpDropNotRequestedNad</a>	1..1
<a href="#">LinTpScheduleChangeDiag</a>	1..1

Parameter Name	LinTpDropNotRequestedNad	
Description	<p>Configures if TP Frames of not requested LIN-Slaves are dropped or not.</p> <ul style="list-style-type: none"> <li>▶ <code>false</code>: Do drop TP Frames of Not requested LIN-Slaves</li> <li>▶ <code>true</code>: Drop not TP Frames of Not requested LIN-Slaves</li> </ul>	
Multiplicity	1..1	
Type	BOOLEAN	
Default value	false	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

Parameter Name	LinTpScheduleChangeDiag	
Description	<p>Enables or disables the call of BswM_LinTp_RequestMode() to diagnostic request/response schedule.</p> <ul style="list-style-type: none"> <li>▶ <code>false</code>: BswM is not called</li> <li>▶ <code>true</code>: BswM is called</li> </ul>	
Multiplicity	1..1	
Type	BOOLEAN	
Default value	false	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	AUTOSAR_ECUC	

#### 5.2.1.2.4. LinTpRxNSdu

Parameters included	
Parameter name	Multiplicity
<a href="#">LinTpDI</a>	1..1

Parameters included	
<a href="#">LinTpNcr</a>	0..1
<a href="#">LinTpRxNSduId</a>	1..1
<a href="#">LinTpRxNSduNad</a>	1..1
<a href="#">LinTpRxNSduPduRef</a>	1..1
<a href="#">LinTpRxNSduChannelRef</a>	1..1
<a href="#">LinTpRxNSduTpChannelRef</a>	1..1

Parameter Name	LinTpDI	
<b>Description</b>	<p>Data Length Code of this RxNsdu. In case of variable length message, this value indicates the minimum data length.</p> <p>Range of minimum length is 1 to 4095.</p> <p>Note that this is not relevant for Tx. The reason for this is to have identical structures for Tx and Rx.</p>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER	
<b>Default value</b>	1	
<b>Range</b>	<=4095	
	>=1	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

Parameter Name	LinTpNcr	
<b>Description</b>	<p>Value in seconds of the N_Cr timeout. N_Cr is the time until reception of the next Consecutive Frame N_PDU.</p> <p><b>Note: Disabling this config parameter or a value of 0.0 disables this timeout.</b></p>	
<b>Multiplicity</b>	0..1	
<b>Type</b>	FLOAT	
<b>Default value</b>	1	
<b>Range</b>	<=1	
	>=0	
<b>Configuration class</b>	<b>PostBuild:</b>	VariantPostBuild

<b>Origin</b>	AUTOSAR_ECUC
---------------	--------------

<b>Parameter Name</b>	<b>LinTpRxNSduId</b>	
<b>Description</b>	The identifier of the Transport Protocol message.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpRxNSduNad</b>	
<b>Description</b>	A N-SDU transported on LIN is identified using the NAD for the specific slave.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER	
<b>Default value</b>	1	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpRxNSduPduRef</b>	
<b>Description</b>	Reference to the global PDU.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	REFERENCE	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpRxNSduChannelRef</b>	
<b>Description</b>	Index of the channel this N-SDU belongs to.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	SYMBOLIC-NAME-REFERENCE	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC	

<b>Parameter Name</b>	<b>LinTpRxNSduTpChannelRef</b>	
<b>Description</b>	Reference to LinTp configuration for this channel.	
<b>Multiplicity</b>	1..1	

Type	SYMBOLIC-NAME-REFERENCE	
Configuration class	VariantPostBuild:	VariantPostBuild
Origin	Elektrobit Automotive GmbH	

#### 5.2.1.2.5. LinTpTxNSdu

Parameters included	
Parameter name	Multiplicity
<a href="#">LinTpNas</a>	1..1
<a href="#">LinTpNcs</a>	0..1
<a href="#">LinTpTxNSdulld</a>	1..1
<a href="#">LinTpTxNSduNad</a>	1..1
<a href="#">LinTpTxNSduPduRef</a>	1..1
<a href="#">LinTpTxNSduChannelRef</a>	1..1
<a href="#">LinTpTxNSduTpChannelRef</a>	1..1

Parameter Name	LinTpNas
Description	Value in second of the N_As timeout. N_As is the time for transmission of a LIN frame (any N_PDU) on the part of the sender.
Multiplicity	1..1
Type	FLOAT
Default value	1
Range	<div>&lt;=1</div> <div>&gt;=0</div>
Configuration class	VariantPostBuild: VariantPostBuild
Origin	AUTOSAR_ECUC

Parameter Name	LinTpNcs
Description	Value in seconds of for the maximum N_CS. This timeout monitors the time waiting for Tx-data arrival within the Ecu.  <b>Note: A value of 0.0 disables this timeout.</b>
Multiplicity	0..1
Type	FLOAT

<b>Default value</b>	0.8
<b>Range</b>	<=1
	>=0
<b>Configuration class</b>	<b>PostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinTpTxNSduld</b>
<b>Description</b>	The identifier of the Transport Protocol message. This ID will be the one that is communicated with upper layers.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinTpTxNSduNad</b>
<b>Description</b>	A N-SDU transported on LIN is identified using the NAD for the specific slave.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Default value</b>	1
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinTpTxNSduPduRef</b>
<b>Description</b>	Reference to the global PDU.
<b>Multiplicity</b>	1..1
<b>Type</b>	REFERENCE
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinTpTxNSduChannelRef</b>
<b>Description</b>	Index of the channel this N-SDU belongs to.
<b>Multiplicity</b>	1..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Configuration class</b>	<b>VariantPostBuild:</b> VariantPostBuild

<b>Origin</b>	AUTOSAR_ECUC	
<b>Parameter Name</b>	<b>LinTpTxNSduTpChannelRef</b>	
<b>Description</b>	Reference to LinTp configuration for this channel.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	SYMBOLIC-NAME-REFERENCE	
<b>Configuration class</b>	<b>VariantPostBuild:</b>	VariantPostBuild
<b>Origin</b>	Elektrobit Automotive GmbH	

#### 5.2.1.2.6. CommonPublishedInformation

Parameters included	
Parameter name	Multiplicity
<a href="#">ArMajorVersion</a>	1..1
<a href="#">ArMinorVersion</a>	1..1
<a href="#">ArPatchVersion</a>	1..1
<a href="#">SwMajorVersion</a>	1..1
<a href="#">SwMinorVersion</a>	1..1
<a href="#">SwPatchVersion</a>	1..1
<a href="#">ModuleId</a>	1..1
<a href="#">VendorId</a>	1..1
<a href="#">Release</a>	1..1

<b>Parameter Name</b>	<b>ArMajorVersion</b>	
<b>Label</b>	AUTOSAR Major Version	
<b>Description</b>	Major version number of AUTOSAR specification on which the appropriate implementation is based on.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER_LABEL	
<b>Default value</b>	4	
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>ArMinorVersion</b>
-----------------------	-----------------------

<b>Label</b>	AUTOSAR Minor Version	
<b>Description</b>	Minor version number of AUTOSAR specification on which the appropriate implementation is based on.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER_LABEL	
<b>Default value</b>	0	
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>ArPatchVersion</b>	
<b>Label</b>	AUTOSAR Patch Version	
<b>Description</b>	Patch level version number of AUTOSAR specification on which the appropriate implementation is based on.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER_LABEL	
<b>Default value</b>	0	
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>SwMajorVersion</b>	
<b>Label</b>	Software Major Version	
<b>Description</b>	Major version number of the vendor specific implementation of the module.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER_LABEL	
<b>Default value</b>	5	
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

<b>Parameter Name</b>	<b>SwMinorVersion</b>	
<b>Label</b>	Software Minor Version	
<b>Description</b>	Minor version number of the vendor specific implementation of the module. The numbering is vendor specific.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	INTEGER_LABEL	

<b>Default value</b>	8
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>SwPatchVersion</b>
<b>Label</b>	Software Patch Version
<b>Description</b>	Patch level version number of the vendor specific implementation of the module. The numbering is vendor specific.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	17
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>ModuleId</b>
<b>Label</b>	Numeric Module ID
<b>Description</b>	Module ID of this module from Module List
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	32770
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>VendorId</b>
<b>Label</b>	Vendor ID
<b>Description</b>	Vendor ID of the dedicated implementation of this module according to the AUTOSAR vendor list
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	1
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>Release</b>
-----------------------	----------------

<b>Label</b>	Release Information	
<b>Multiplicity</b>	1..1	
<b>Type</b>	STRING_LABEL	
<b>Default value</b>		
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

#### 5.2.1.2.7. PublishedInformation

Parameters included	
Parameter name	Multiplicity
<a href="#">PbcfgMSupport</a>	1..1

<b>Parameter Name</b>	<b>PbcfgMSupport</b>
<b>Label</b>	PbcfgM support
<b>Description</b>	Specifies whether or not the LinTp can use the PbcfgM module for post-build support.
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	true
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

## 5.2.2. Application programming interface (API)

### 5.2.2.1. Macro constants

#### 5.2.2.1.1. LINIF\_NULL\_SCHEDULE

<b>Purpose</b>	Null schedule identification.
<b>Value</b>	0U

#### 5.2.2.1.2. PBCFGM\_NO\_CFG\_REQUIRED

<b>Purpose</b>	
<b>Value</b>	

### 5.2.2.2. Functions

#### 5.2.2.2.1. LinIf\_CheckWakeup

<b>Purpose</b>	Check wakeup function.	
<b>Synopsis</b>	<pre>Std_ReturnType <b>LinIf_CheckWakeup</b> ( EcuM_ - WakeupSourceType WakeupSource );</pre>	
<b>Service ID</b>	0x60	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	WakeupSource	Source device, which initiated the wake up event: LIN controller or LIN transceiver
<b>Return Value</b>	Result of the operation	
	E_OK	No error has occurred during execution of the API
	E_NOT_OK	An error has occurred during execution of the API
<b>Description</b>	Will be called when the EcuM has been notified about a wakeup on a specific LIN channel.	

#### 5.2.2.2.2. LinIf\_EnableBusMirroring

<b>Purpose</b>	This function indicates the channels that are enabled for bus mirroring.	
<b>Synopsis</b>	<pre>Std_ReturnType <b>LinIf_EnableBusMirroring</b> ( Net- workHandleType Channel , boolean MirroringActive );</pre>	
<b>Parameters (in)</b>	Channel	Channel which is currently processed
	MirroringActive	The state of the channel - if it is enabled for bus mirroring or not

<b>Parameters (in,out)</b>	Channel	Channel which is currently processed
	MirroringActive	The state of the channel - if it is enabled for bus mirroring or not
<b>Return Value</b>		

#### 5.2.2.2.3. LinIf\_GetTrcvMode

<b>Purpose</b>		
<b>Synopsis</b>	<pre>Std_ReturnType LinIf_GetTrcvMode ( NetworkHandleType Channel , LinTrcv_TrcvModeType * TransceiverModePtr );</pre>	
<b>Return Value</b>		

#### 5.2.2.2.4. LinIf\_GetTrcvWakeupReason

<b>Purpose</b>		
<b>Synopsis</b>	<pre>Std_ReturnType LinIf_GetTrcvWakeupReason ( NetworkHandleType Channel , LinTrcv_TrcvWakeupReasonType * TrcvWuReasonPtr );</pre>	
<b>Return Value</b>		

#### 5.2.2.2.5. LinIf\_GetVersionInfo

<b>Purpose</b>	Return version Information.	
<b>Synopsis</b>	<pre>void LinIf_GetVersionInfo ( Std_ VersionInfoType * versioninfo );</pre>	
<b>Service ID</b>	0x03	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (out)</b>	versioninfo	Version information are written to this variable.

#### 5.2.2.2.6. LinIf\_GotoSleep

<b>Purpose</b>	Set channel to sleep.
----------------	-----------------------

<b>Synopsis</b>	<code>Std_ReturnType LinIf_GotoSleep ( NetworkHandleType Channel );</code>	
<b>Service ID</b>	0x06	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	Channel	The LIN channel to operate on.
<b>Return Value</b>	Result of the request	
	E_OK	Request has been accepted or sleep transition is already in progress
	E_NOT_OK	Request has not been accepted
<b>Description</b>	This function schedules a sleep request for execution. The channel will not enter sleep mode before the next schedule entry is due.	

#### 5.2.2.2.7. LinIf\_Init

<b>Purpose</b>	Initialize module.	
<b>Synopsis</b>	<code>void LinIf_Init ( const LinIf_ConfigType * ConfigPtr );</code>	
<b>Service ID</b>	0x01	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	ConfigPtr	Not used.
<b>Description</b>	This function initializes the LIN Interface	

#### 5.2.2.2.8. LinIf\_IsValidConfig

<b>Purpose</b>	Validate configuration.	
<b>Synopsis</b>	<code>Std_ReturnType LinIf_IsValidConfig ( const void * voidConfigPtr );</code>	
<b>Service ID</b>	0x62	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Return Value</b>	E_OK if the given module configurations is valid otherwise E_NOT_OK.	
<b>Description</b>	Checks if the post build configuration fits to the link time configuration part.	

#### 5.2.2.2.9. LinIf\_MainFunction

<b>Purpose</b>	LIN Interface main processing function.
<b>Synopsis</b>	<pre>void LinIf_MainFunction ( void );</pre>
<b>Service ID</b>	0x80
<b>Production Errors</b>	<ul style="list-style-type: none"> <li>▶ <a href="#">LINIF_E_RX_CHECKSUM_ERROR</a>: thrown, if a checksum error is detected.</li> <li>▶ <a href="#">LINIF_E_RX_NO_RESPONSE_ERROR</a>: thrown, if a slave not responding error is detected.</li> <li>▶ <a href="#">LINIF_E_TX_BIT_ERROR</a>: thrown, if a bit error is detected.</li> </ul>
<b>Description</b>	This function performs nearly everything the LIN Interface has to handle. All access to the LIN bus happens here.

#### 5.2.2.2.10. LinIf\_ScheduleRequest

<b>Purpose</b>	Request schedule table for execution.	
<b>Synopsis</b>	<pre>Std_ReturnType LinIf_ScheduleRequest ( NetworkHandle- Type Channel , LinIf_SchHandleType ScheduleTable );</pre>	
<b>Service ID</b>	0x05	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	Channel	The LIN channel to operate on.
	ScheduleTable	The Id of the schedule requested.
<b>Return Value</b>	Result of the operation	
	E_OK	Schedule table request has been accepted
	E_NOT_OK	Schedule table request has been rejected
<b>Description</b>	This function schedules a schedule table for execution. Note that when the NULL_-SCHEDULE is requested, all previous requests are deleted.	

#### 5.2.2.2.11. LinIf\_SetTrcvMode

<b>Purpose</b>	
----------------	--

<b>Synopsis</b>	Std_ReturnType <b>LinIf_SetTrcvMode</b> ( NetworkHandleType Channel , LinTrcv_TrvcModeType TransceiverMode );	
<b>Return Value</b>		

#### 5.2.2.2.12. LinIf\_SetTrcvWakeupMode

<b>Purpose</b>		
<b>Synopsis</b>	Std_ReturnType <b>LinIf_SetTrcvWakeupMode</b> ( NetworkHandleType Channel , LinTrcv_TrvcWakeupModeType LinTrcvWakeupMode );	
<b>Return Value</b>		

#### 5.2.2.2.13. LinIf\_Transmit

<b>Purpose</b>	Schedule transmission of a sporadic frame.	
<b>Synopsis</b>	Std_ReturnType <b>LinIf_Transmit</b> ( PduIdType LinTxPduId , const PduInfoType * PduInfoPtr );	
<b>Service ID</b>	0x04	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	LinTxPduId	The PDU Id of the sporadic frame to be sent.
	PduInfoPtr	Not used.
<b>Return Value</b>	Result of the operation	
	E_OK	Transmit request has been accepted
	E_NOT_OK	Transmit request has been rejected
<b>Description</b>	This function schedules sporadic frames for transmission.	

#### 5.2.2.2.14. LinIf\_Wakeup

<b>Purpose</b>	Wake up channel.	
<b>Synopsis</b>	Std_ReturnType <b>LinIf_Wakeup</b> ( NetworkHandleType Channel );	
<b>Service ID</b>	0x07	

<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	Channel	The LIN channel to operate on.
<b>Return Value</b>	Result of the operation	
	E_OK	Wakeup request has been accepted
	E_NOT_OK	Wakeup request has been rejected
<b>Description</b>	This function wakes up a LIN channel.	

#### 5.2.2.2.15. LinTp\_CancelReceive

<b>Purpose</b>	Cancel receive.	
<b>Synopsis</b>	<code>Std_ReturnType LinTp_CancelReceive ( PduIdType LinTpRxSduId );</code>	
<b>Service ID</b>	0x47	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	LinTpRxSduId	- This parameter contains the LinTP instance unique identifier of the Lin N-SDU reception of which has to be canceled.
<b>Return Value</b>	Result of the operation	
	E_OK	The cancellation request was accepted.
	E_NOT_OK:	Cancellation request of the reception of the specified Lin N-SDU is rejected
<b>Description</b>	This function requests the cancellation of a segmented reception of the given Rx N-SDU. The cancellation itself will be performed during the next <a href="#">LinIf_MainFunction()</a> call.	

#### 5.2.2.2.16. LinTp\_CancelTransmit

<b>Purpose</b>	Cancel transmit.	
<b>Synopsis</b>	<code>Std_ReturnType LinTp_CancelTransmit ( PduIdType LinTpTxSduId );</code>	
<b>Service ID</b>	0x46	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	

<b>Parameters (in)</b>	LinTpTxSduId	LIN N-SDU identifier
<b>Return Value</b>	Result of the operation	
	E_NOT_OK:	Cancellation request of the transfer of the specified Lin N-SDU is rejected
<b>Description</b>	This function is defined for the upper layer to have a cancel transmit function. It does nothing else than checking the LinTp state if development error detection is enabled and always returns E_NOT_OK. This is a dummy method introduced for interface compatibility.	

#### 5.2.2.2.17. LinTp\_ChangeParameter

<b>Purpose</b>	Change parameter.	
<b>Synopsis</b>	<pre>Std_ReturnType <b>LinTp_ChangeParameter</b> ( PduIdType id , TPPParameterType parameter , uint16 value );</pre>	
<b>Service ID</b>	0x44	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	id	- Identifier of the received N-SDU on which the reception parameter has to be changed.
	parameter	- The selected parameter that the request shall change (STmin).
	value	- The new value of the parameter.
<b>Return Value</b>	Result of the operation	
	E_NOT_OK:	request is not accepted
<b>Description</b>	This function is defined for the upper layer to have a change parameter request function. This service is used to request the change of reception parameter STmin for a specified N-SDU.	

#### 5.2.2.2.18. LinTp\_GetVersionInfo

<b>Purpose</b>	Return version Information.
<b>Synopsis</b>	<pre>void <b>LinTp_GetVersionInfo</b> ( Std_ VersionInfoType * versioninfo );</pre>

<b>Service ID</b>	0x42	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (out)</b>	versioninfo	Version information are written to this variable.

#### 5.2.2.2.19. LinTp\_Init

<b>Purpose</b>	Initialize TP.	
<b>Synopsis</b>	<pre>void <b>LinTp_Init</b> ( const LinTp_ConfigType * ConfigPtr );</pre>	
<b>Service ID</b>	0x40	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	ConfigPtr	Not used.
<b>Description</b>	This function initializes the LIN Transport Layer	

#### 5.2.2.2.20. LinTp\_IsValidConfig

<b>Purpose</b>	Validate configuration.	
<b>Synopsis</b>	<pre>Std_ReturnType <b>LinTp_IsValidCon-</b> <b>fig</b> ( const void * voidConfigPtr );</pre>	
<b>Service ID</b>	0x48	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Return Value</b>	E_OK if the given module configurations is valid otherwise E_NOT_OK.	
<b>Description</b>	Checks if the post build configuration fits to the link time configuration part.	

#### 5.2.2.2.21. LinTp\_Transmit

<b>Purpose</b>	Start a TP transmission.	
<b>Synopsis</b>	<pre>Std_ReturnType <b>LinTp_Transmit</b> ( PduIdType LinTp- TxSduId , const PduInfoType * LinTpTxInfoPtr );</pre>	

<b>Service ID</b>	0x41	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Non-Reentrant	
<b>Parameters (in)</b>	LinTpTxSduId	The PDU Id of the message to be sent
	LinTpTxInfoPtr	A PduInfoType to pass the length of the message
<b>Return Value</b>	Result of the operation	
	E_OK	Transmit request has been accepted
	E_NOT_OK	Transmit request has been rejected
<b>Description</b>	This function starts a LinTP-Transmission if there is currently no other transmission ongoing on the channel identified by the PDU Id.	

## 5.2.3. Integration notes

### 5.2.3.1. Exclusive areas

This section describes the exclusive areas used by the `LinIf` and `LinTp` module.

#### 5.2.3.1.1. SCHM\_LINIF\_EXCLUSIVE\_AREA\_0

<b>Protected data structures</b>	All shared data that shall be protected from mutual access.
<b>Recommended locking mechanism</b>	This exclusive area must always be protected by a locking mechanism. The options for locking are described in the <a href="#">EB tresos AutoCore Generic</a> documentation. Refer to the section Mapping exclusive areas in the basic software modules in the Integration notes section for details.

### 5.2.3.2. Production errors

<a href="#">LINIF_E_RX_CHECKSUM_ERROR</a>	► <a href="#">LinIf_MainFunction</a>
<a href="#">LINIF_E_RX_NO_RESPONSE_ERROR</a>	► <a href="#">LinIf_MainFunction</a>

[LINIF\\_E\\_TX\\_BIT\\_ERROR](#) ► [LinIf\\_MainFunction](#)

### 5.2.3.3. Memory mapping

General information about memory mapping is provided in the EB tresos AutoCore Generic documentation. Refer to the section `Memory mapping and compiler abstraction` in the `Integration notes` section for details.

The following table provides the list of sections that may be mapped for this module:

Memory section
CODE
CONST_32
VAR_INIT_16
VAR_INIT_8
VAR_CLEARED_UNSPECIFIED
CONFIG_DATA_UNSPECIFIED
VAR_INIT_UNSPECIFIED
CONST_UNSPECIFIED
NOTIF_CALLOUT_CODE

### 5.2.3.4. Integration requirements

#### WARNING

#### Integration requirements list is not exhaustive

The following list of integration requirements helps you to integrate your product. However, this list is not exhaustive. You also require information from the user's guide, release notes, and EB tresos AutoCore known issues to successfully integrate your product.

#### 5.2.3.4.1. `lim.LinIf.EB_INTREQ_LinIf_0001`

Description	<p>Some LIN Driver API functions must support being called within an interrupt lock Description: The following LIN Driver API functions must support being called by the LinIf within a global interrupt lock:</p> <p><code>Lin_Wakeup()</code></p>
-------------	---

	Lin_WakeupInternal()
<b>Rationale</b>	The LinIf makes calls to these functions in its critical section to make sure, that the state is consistent to the LIN Driver. As it is assumed, that the LinIf critical sections are configured as global interrupt locks this means that these functions must support being called in such an interrupt lock situation.

#### 5.2.3.4.2. lim.LinIf.EB\_INTREQ\_LinIf\_0002

<b>Description</b>	LinIf shall not be initialized as operational Description: The LinIf configuration parameter LinIfStartupState shall only be configured to LINIF_CHANNEL_SLEEP. Configuring it to LINIF_CHANNEL_OPERATIONAL is obsolete.
<b>Rationale</b>	Following bugzilla shall be respected: <a href="https://bugzilla.autosar.org/show_bug.cgi?id=73095">https://bugzilla.autosar.org/show_bug.cgi?id=73095</a>

## 5.3. LinSM

### 5.3.1. Configuration parameters

Containers included		
Container name	Multiplicity	Description
<a href="#">CommonPublishedInformation</a>	1..1	<b>Label:</b> Common Published Information Common container, aggregated by all modules. It contains published information about vendor and versions.
<a href="#">LinSMDefensiveProgramming</a>	1..1	<b>Label:</b> Defensive Programming Options Parameters for defensive programming
<a href="#">LinSMConfigSet</a>	1..1	This container describes the configuration set of LinSM.  This is a MultipleConfigurationContainer, i.e. this container and its sub-containers exist once per configuration set.
<a href="#">LinSMGeneral</a>	1..1	This container contains general parameters of LIN State Manager module.
<a href="#">PublishedInformation</a>	1..1	<b>Label:</b> EB Published Information

Containers included		
		Additional published parameters not covered by Common-PublishedInformation container.

Parameters included	
Parameter name	Multiplicity
<a href="#">IMPLEMENTATION_CONFIG_VARIANT</a>	1..1

Parameter Name	IMPLEMENTATION_CONFIG_VARIANT
Label	Config Variant
Description	Configuration variant. Only pre-compile configuration is supported.
Multiplicity	1..1
Type	ENUMERATION
Default value	VariantPreCompile
Range	VariantPreCompile

### 5.3.1.1. CommonPublishedInformation

Parameters included	
Parameter name	Multiplicity
<a href="#">ArMajorVersion</a>	1..1
<a href="#">ArMinorVersion</a>	1..1
<a href="#">ArPatchVersion</a>	1..1
<a href="#">SwMajorVersion</a>	1..1
<a href="#">SwMinorVersion</a>	1..1
<a href="#">SwPatchVersion</a>	1..1
<a href="#">ModuleId</a>	1..1
<a href="#">VendorId</a>	1..1
<a href="#">Release</a>	1..1

Parameter Name	ArMajorVersion
Label	AUTOSAR Major Version
Description	Major version number of AUTOSAR specification on which the appropriate implementation is based on.

<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	1
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>ArMinorVersion</b>
<b>Label</b>	AUTOSAR Minor Version
<b>Description</b>	Minor version number of AUTOSAR specification on which the appropriate implementation is based on.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	3
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>ArPatchVersion</b>
<b>Label</b>	AUTOSAR Patch Version
<b>Description</b>	Patch level version number of AUTOSAR specification on which the appropriate implementation is based on.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	0
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>SwMajorVersion</b>
<b>Label</b>	Software Major Version
<b>Description</b>	Major version number of the vendor specific implementation of the module.
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER_LABEL
<b>Default value</b>	3
<b>Configuration class</b>	<b>PublishedInformation:</b>
<b>Origin</b>	Elektrobit Automotive GmbH

Parameter Name	SwMinorVersion	
Label	Software Minor Version	
Description	Minor version number of the vendor specific implementation of the module. The numbering is vendor specific.	
Multiplicity	1..1	
Type	INTEGER_LABEL	
Default value	4	
Configuration class	PublishedInformation:	
Origin	Elektrobit Automotive GmbH	

Parameter Name	SwPatchVersion	
Label	Software Patch Version	
Description	Patch level version number of the vendor specific implementation of the module. The numbering is vendor specific.	
Multiplicity	1..1	
Type	INTEGER_LABEL	
Default value	11	
Configuration class	PublishedInformation:	
Origin	Elektrobit Automotive GmbH	

Parameter Name	ModuleId	
Label	Numeric Module ID	
Description	Module ID of this module from Module List	
Multiplicity	1..1	
Type	INTEGER_LABEL	
Default value	141	
Configuration class	PublishedInformation:	
Origin	Elektrobit Automotive GmbH	

Parameter Name	VendorId	
Label	Vendor ID	
Description	Vendor ID of the dedicated implementation of this module according to the AUTOSAR vendor list	
Multiplicity	1..1	

Type	INTEGER_LABEL	
Default value	1	
Configuration class	PublishedInformation:	
Origin	Elektrobit Automotive GmbH	

Parameter Name	Release	
Label	Release Information	
Multiplicity	1..1	
Type	STRING_LABEL	
Default value		
Configuration class	PublishedInformation:	
Origin	Elektrobit Automotive GmbH	

### 5.3.1.2. LinSMDefensiveProgramming

Parameters included	
Parameter name	Multiplicity
<a href="#">LinSMDefProgEnabled</a>	1..1
<a href="#">LinSMPrecondAssertEnabled</a>	1..1
<a href="#">LinSMPostcondAssertEnabled</a>	1..1
<a href="#">LinSMStaticAssertEnabled</a>	1..1
<a href="#">LinSMUnreachAssertEnabled</a>	1..1
<a href="#">LinSMInvariantAssertEnabled</a>	1..1

Parameter Name	LinSMDefProgEnabled
Label	Enable Defensive Programming
Description	<p>Enables or disables the defensive programming feature for the module LinSM.</p> <p>Note: This feature is dependent on the use of the development error detection module. To use the defensive programming feature, proceed as follows:</p> <ol style="list-style-type: none"> <li>1. Enable development error detection</li> <li>2. Enable defensive programming</li> <li>3. Enable assertions as required</li> </ol>

<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LinSMPrecondAssertEnabled</b>
<b>Label</b>	Enable Precondition Assertions
<b>Description</b>	<p>Enables handling of precondition assertion checks reported from the module LinSM.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (LinSMDevErrorDetect): must be enabled</li> <li>▶ Enable Defensive Programming (LinSMDefProgEnabled): must be enabled</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LinSMPostcondAssertEnabled</b>
<b>Label</b>	Enable Postcondition Assertions
<b>Description</b>	<p>Enables handling of postcondition assertion checks reported from the module LinSM.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (LinSMDevErrorDetect): must be enabled</li> <li>▶ Enable Defensive Programming (LinSMDefProgEnabled): must be enabled</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false

<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LinSMStaticAssertEnabled</b>
<b>Label</b>	Enable Static Assertions
<b>Description</b>	<p>Enables handling of static assertion checks reported from the module LinSM.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (LinSMDevErrorDetect): must be enabled</li> <li>▶ Enable Defensive Programming (LinSMDefProgEnabled): must be enabled</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LinSMUnreachAssertEnabled</b>
<b>Label</b>	Enable Unreachable Code Assertions
<b>Description</b>	<p>Enables handling of unreachable code assertion checks reported from the module LinSM.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (LinSMDevErrorDetect): must be enabled</li> <li>▶ Enable Defensive Programming (LinSMDefProgEnabled): must be enabled</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

<b>Parameter Name</b>	<b>LinSMInvariantAssertEnabled</b>
-----------------------	------------------------------------

<b>Label</b>	Enable Invariant Assertions	
<b>Description</b>	<p>Enables handling of invariant assertion checks reported from functions of the module LinSM.</p> <p>Dependency on parameter(s):</p> <ul style="list-style-type: none"> <li>▶ Enable Development Error Detection (<code>LinSMDevErrorDetect</code>): must be enabled</li> <li>▶ Enable Defensive Programming (<code>LinSMDefProgEnabled</code>): must be enabled</li> </ul>	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>VariantPreCompile:</b>	VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH	

### 5.3.1.3. LinSMConfigSet

Containers included		
Container name	Multiplicity	Description
<a href="#">LinSMChannel</a>	1..255	Describes each LIN channel the LinSM is connected to.

### 5.3.1.4. LinSMChannel

Containers included		
Container name	Multiplicity	Description
<a href="#">LinSMSchedule</a>	1..254	The schedule references to a schedule that is located in the LinIf configuration.

Parameters included	
Parameter name	Multiplicity
<a href="#">LinSMConfirmationTimeout</a>	1..1
<a href="#">LinSMSleepSupport</a>	1..1
<a href="#">LinSMTransceiverPassiveMode</a>	0..1

Parameters included	
<a href="#">LinSMComMNetworkHandleRef</a>	1..1
<a href="#">LinSMModeRequestRepetitionMax</a>	1..1

Parameter Name	LinSMConfirmationTimeout
Description	<p>Timeout in seconds for the goto sleep, wakeup and schedule request calls to LinIf.</p> <p>The timeout must be longer than a goto-sleep command on the bus (i.e. it is bit rate dependent).</p> <p>It also must be longer than the expected duration between a schedule request and the next confirmation - that is, it must be longer than the runtime of the longest RUN_ONCE schedule table in the LinIf configuration.</p> <p>Alternatively, setting this parameter to 0 will disable the timeout.</p>
Multiplicity	1..1
Type	FLOAT
Default value	0
Configuration class	VariantPreCompile: VariantPreCompile
Origin	AUTOSAR_ECUC

Parameter Name	LinSMSleepSupport
Description	<p>Some LIN clusters do not need sleep, they will just shut off. This parameter will affect the behavior to achieve the 'full communication' and 'no communication' states.</p> <ul style="list-style-type: none"> <li>▶ <code>true</code>: LinSM will call LinIf_Wakeup() or LinIf_GotoSleep() to change the communication state.</li> <li>▶ <code>false</code>: LinSM will change the communication state without calling LinIf_Wakeup() or LinIf_GotoSleep().</li> </ul> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>▶ <b>Execution time reduction (code):</b> Disabling this parameter reduces the execution time of the module code.</li> <li>▶ <b>ROM reduction (code):</b> Disabling this parameter reduces the ROM consumption of the module code.</li> <li>▶ <b>ROM reduction (config):</b> Choosing a globally common value for this parameter reduces the ROM consumption of the module configuration.</li> </ul>

<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinSMTransceiverPassiveMode</b>
<b>Description</b>	Selects STANDBY (true) or SLEEP (false) transceiver mode when entering LINSM_NO_COM.
<b>Multiplicity</b>	0..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	false
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinSMComMNetworkHandleRef</b>
<b>Description</b>	<p>Unique handle to identify one certain LIN network.</p> <p>Reference to one of the network handles configured in the ComM.</p> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>▶ <b>Execution time reduction (code):</b> Configuring consecutive channel IDs for the ComM channels referenced by LinSM reduces the execution time of the module code.</li> <li>▶ <b>ROM reduction (code):</b> Configuring consecutive channel IDs for the ComM channels referenced by LinSM reduces the ROM consumption of the module code.</li> </ul>
<b>Multiplicity</b>	1..1
<b>Type</b>	SYMBOLIC-NAME-REFERENCE
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

<b>Parameter Name</b>	<b>LinSMModeRequestRepetitionMax</b>
<b>Description</b>	Specifies the maximal amount of mode request repetitions without a respective mode indication from the LinIf module until the LinSM module reports a development error to the DET and tries to go back to no communication.

<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Default value</b>	0
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	Elektrobit Automotive GmbH

### 5.3.1.5. LinSMSchedule

Parameters included	
Parameter name	Multiplicity
<a href="#">LinSMScheduleIndex</a>	1..1
<a href="#">LinSMScheduleIndexRef</a>	1..1

Parameter Name	LinSMScheduleIndex
<b>Description</b>	<p>This index parameter can be used by the BswM as a SymbolicNameReference target.</p> <p>The LinSM just forwards the request from the BswM to LinIf.</p> <p>Note that the value of the LinSMScheduleIndex shall be the same as the value from the LinIf.</p> <p><b>This parameter is currently not used by LinSM module. However for configuration compatibility with other modules, please configure LinSMScheduleIndex properly.</b></p>
<b>Multiplicity</b>	1..1
<b>Type</b>	INTEGER
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

Parameter Name	LinSMScheduleIndexRef
<b>Description</b>	<p>Reference to a schedule table in the LinIf configuration.</p> <p><b>Optimization Effect:</b></p> <ul style="list-style-type: none"> <li>► <b>Execution time reduction (code):</b> Configuring consecutive indices for the schedule tables referenced by LinSM reduces the execution time of the module code.</li> </ul>

	► <b>ROM reduction (code):</b> Configuring consecutive indices for the schedule tables referenced by LinSM reduces the ROM consumption of the module code.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	SYMBOLIC-NAME-REFERENCE	
<b>Configuration class</b>	<b>VariantPreCompile:</b>	VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC	

### 5.3.1.6. LinSMGeneral

Parameters included	
Parameter name	Multiplicity
<a href="#">LinSMDevErrorDetect</a>	1..1
<a href="#">LinSMMainProcessingPeriod</a>	1..1
<a href="#">LinSMVersionInfoApi</a>	1..1
<a href="#">LinSMMultiCoreSupport</a>	1..1

Parameter Name	LinSMDevErrorDetect
<b>Description</b>	Switches the Development Error Detection and Notification ON or OFF.  <b>Optimization Effect:</b>  ► <b>ROM reduction (code):</b> Disabling this parameter reduces the ROM consumption of the module code.  ► <b>Execution time reduction (code):</b> Disabling this parameter reduces the execution time of the module code.
<b>Multiplicity</b>	1..1
<b>Type</b>	BOOLEAN
<b>Default value</b>	true
<b>Configuration class</b>	<b>VariantPreCompile:</b> VariantPreCompile
<b>Origin</b>	AUTOSAR_ECUC

Parameter Name	LinSMMainProcessingPeriod
<b>Description</b>	Fixed period that the MainFunction shall be called [s].
<b>Multiplicity</b>	1..1

Type	Float
Default value	0.02
Range	<=5.0 >=0.00001
Configuration class	VariantPreCompile: VariantPreCompile
Origin	AUTOSAR_ECUC

Parameter Name	LinSMVersionInfoApi
Description	Switches the LinSM_GetVersionInfo function ON or OFF.  <b>Optimization Effect:</b>  ► <b>ROM reduction (code):</b> Disabling this parameter reduces the ROM consumption of the module code.
Multiplicity	1..1
Type	Boolean
Default value	false
Configuration class	VariantPreCompile: VariantPreCompile
Origin	AUTOSAR_ECUC

Parameter Name	LinSMMultiCoreSupport
Description	Switches the LinSM MultiCore Support ON or OFF.
Multiplicity	1..1
Type	Boolean
Default value	false
Configuration class	VariantPreCompile: VariantPreCompile

### 5.3.1.7. PublishedInformation

Parameters included	
Parameter name	Multiplicity
<a href="#">PbcfgMSupport</a>	1..1

Parameter Name	PbcfgMSupport
Label	PbcfgM support

<b>Description</b>	Specifies whether or not the LinSM can use the PbcfgM module for post-build support.	
<b>Multiplicity</b>	1..1	
<b>Type</b>	BOOLEAN	
<b>Default value</b>	false	
<b>Configuration class</b>	<b>PublishedInformation:</b>	
<b>Origin</b>	Elektrobit Automotive GmbH	

## 5.3.2. Application programming interface (API)

### 5.3.2.1. Type definitions

#### 5.3.2.1.1. LinSM\_ModeType

<b>Purpose</b>	Type to report the current mode to the BswM.
<b>Type</b>	uint8
<b>Description</b>	Range: <ul style="list-style-type: none"><li>▶ LINSM_FULL_COM</li><li>▶ LINSM_NO_COM</li></ul>

### 5.3.2.2. Macro constants

#### 5.3.2.2.1. FULL\_COM\_STORED

<b>Purpose</b>	full communication stored
<b>Value</b>	1U

#### 5.3.2.2.2. LINSM\_E\_ALREADY\_INITIALIZED

<b>Purpose</b>	DET Error Code.
----------------	-----------------

<b>Value</b>	0x10U
<b>Description</b>	Initialization API is used when already initialized  ► This error is not used as it contradicts LINSM043.

#### 5.3.2.2.3. LINSM\_E\_CONFIRMATION\_TIMEOUT

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x50U
<b>Description</b>	Timeout of the callbacks from LinIf

#### 5.3.2.2.4. LINSM\_E\_NONEXISTENT\_NETWORK

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x20U
<b>Description</b>	Referenced channel or network does not exist (identification is out of range)

#### 5.3.2.2.5. LINSM\_E\_NOT\_IN\_RUN\_SCHEDULE

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x51U
<b>Description</b>	LinSM_ScheduleRequest called for a channel not in FULL_COM state

#### 5.3.2.2.6. LINSM\_E\_PARAMETER

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x30U
<b>Description</b>	API service called with wrong parameter

#### 5.3.2.2.7. LINSM\_E\_PARAMETER\_POINTER

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x40U

<b>Description</b>	API service called with invalid pointer
--------------------	---

#### 5.3.2.2.8. LINSM\_E\_REPETITION\_MAX\_REACHED

<b>Purpose</b>	DET Error Code:.
<b>Value</b>	0x61U
<b>Description</b>	Repetition max was excedeed

#### 5.3.2.2.9. LINSM\_E\_UNEXPECTED\_CALLOUT

<b>Purpose</b>	DET Error Code:.
<b>Value</b>	0x60U
<b>Description</b>	LinIf signalled an unexpected confirmation

#### 5.3.2.2.10. LINSM\_E\_UNINIT

<b>Purpose</b>	DET Error Code.
<b>Value</b>	0x00U
<b>Description</b>	API called without initialization of LinSM

#### 5.3.2.2.11. LINSM\_FULL\_COM

<b>Purpose</b>	full communication (used for LinSM_ModeType and channel state)
<b>Value</b>	1U

#### 5.3.2.2.12. LINSM\_GOTO\_SLEEP

<b>Purpose</b>	goto sleep in progress (used for internal channel state)
<b>Value</b>	3U

#### 5.3.2.2.13. LINSM\_NO\_COM

<b>Purpose</b>	no communication (used for LinSM_ModeType and channel state)
----------------	--

<b>Value</b>	2U
--------------	----

#### 5.3.2.2.14. LINSM\_SID\_GETCURRENTCOMMODE

<b>Purpose</b>	Service Id of <a href="#">LinSM_GetCurrentComMode()</a> .
<b>Value</b>	0x11U

#### 5.3.2.2.15. LINSM\_SID\_GETVERSIONINFO

<b>Purpose</b>	Service Id of <a href="#">LinSM_GetVersionInfo()</a> .
<b>Value</b>	0x02U

#### 5.3.2.2.16. LINSM\_SID\_GOTOSLEEPCONF

<b>Purpose</b>	Service Id of <a href="#">LinSM_GotoSleepConfirmation()</a> .
<b>Value</b>	0x22U

#### 5.3.2.2.17. LINSM\_SID\_INIT

<b>Purpose</b>	Service Id of <a href="#">LinSM_Init()</a> .
<b>Value</b>	0x01U

#### 5.3.2.2.18. LINSM\_SID\_MAINFUNCTION

<b>Purpose</b>	Service Id of <a href="#">LinSM_MainFunction()</a> .
<b>Value</b>	0x30U

#### 5.3.2.2.19. LINSM\_SID\_REQUESTCOMMODE

<b>Purpose</b>	Service Id of <a href="#">LinSM_RequestComMode()</a> .
----------------	--

<b>Value</b>	0x12U
--------------	-------

#### 5.3.2.2.20. LINSM\_SID\_SCHEDULEREQUEST

<b>Purpose</b>	Service Id of <a href="#">LinSM_ScheduleRequest()</a> .
<b>Value</b>	0x10U

#### 5.3.2.2.21. LINSM\_SID\_SCHEDULEREQUESTCONF

<b>Purpose</b>	Service Id of <a href="#">LinSM_ScheduleRequestConfirmation()</a> .
<b>Value</b>	0x20U

#### 5.3.2.2.22. LINSM\_SID\_WAKEUPCONFIRMATION

<b>Purpose</b>	Service Id of <a href="#">LinSM_WakeupConfirmation()</a> .
<b>Value</b>	0x21U

#### 5.3.2.2.23. LINSM\_WAKEUP

<b>Purpose</b>	wakeup in progress (used for internal channel state)
<b>Value</b>	0U

#### 5.3.2.2.24. NOTHING\_STORED

<b>Purpose</b>	no stored mode
<b>Value</b>	0U

#### 5.3.2.2.25. NO\_COM\_STORED

<b>Purpose</b>	no communication stored
<b>Value</b>	2U

### 5.3.2.3. Functions

#### 5.3.2.3.1. LinSM\_GetCurrentComMode

<b>Purpose</b>	Function to query the current communication mode.	
<b>Synopsis</b>	<pre>Std_ReturnType LinSM_GetCurrentComMode ( Net- workHandleType network , ComM_ModeType * mode );</pre>	
<b>Service ID</b>	0x11	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	network	Identification of the LIN channel
<b>Parameters (out)</b>	mode	Returns the active mode, see ComM_ - ModeType for descriptions of the modes
<b>Return Value</b>	Result of operation	
	E_OK	Ok
	E_NOT_OK	Not possible to perform the request, e.g. not initialized.
<b>Description</b>	Returns the current communication mode for the specified channel.	

#### 5.3.2.3.2. LinSM\_GetVersionInfo

<b>Purpose</b>	Get version information of the LinSM module.	
<b>Synopsis</b>	<pre>void LinSM_GetVersionInfo ( Std_- VersionInfoType * versioninfo );</pre>	
<b>Service ID</b>	0x02	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (out)</b>	versioninfo	Pointer to where to store the version infor- mation of this module.
<b>Description</b>	<p>This service returns the version information of this module. The version information includes:</p> <ul style="list-style-type: none"> <li>▶ Vendor Id</li> <li>▶ Module Id</li> </ul>	

► Vendor specific version numbers

#### 5.3.2.3.3. LinSM\_GotoSleepConfirmation

<b>Purpose</b>	Confirmation callout for GotoSleep transition.	
<b>Synopsis</b>	<pre>void <b>LinSM_GotoSleepConfirmation</b> ( Net- workHandleType network , boolean success );</pre>	
<b>Service ID</b>	0x22	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	network	Identification of the LIN channel
	success	True if goto sleep was successfully sent, false otherwise
<b>Description</b>	The LinIf will call this callback when the go to sleep command is sent successfully or not sent successfully on the network.	

#### 5.3.2.3.4. LinSM\_Init

<b>Purpose</b>	Initializes the LinSM module.	
<b>Synopsis</b>	<pre>void <b>LinSM_Init</b> ( const LinSM_ConfigType * ConfigPtr );</pre>	
<b>Service ID</b>	0x01	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Non reentrant	
<b>Parameters (in)</b>	ConfigPtr	Pointer to the LinSM configuration (ignored)
<b>Description</b>	This function initializes the LinSM. Note that the ConfigPtr parameter is ignored by this implementation as post-build configuration is not supported.	

#### 5.3.2.3.5. LinSM\_MainFunction

<b>Purpose</b>	Cyclic MainFunction for the LIN State Manager.
<b>Synopsis</b>	<pre>void <b>LinSM_MainFunction</b> ( void );</pre>

<b>Service ID</b>	0x30
<b>Sync/Async</b>	Synchronous
<b>Reentrancy</b>	Non-Reentrant
<b>Description</b>	<p>Periodic function that runs the timers of different request timeouts</p> <p>This function must be called cyclically using a fixed time period specified in LinSM-MainProcessingPeriod.</p>

#### 5.3.2.3.6. LinSM\_RequestComMode

<b>Purpose</b>	Requesting of a communication mode by ComM.	
<b>Synopsis</b>	<pre>Std_ReturnType LinSM_RequestComMode ( Net- workHandleType network , ComM_ModeType mode );</pre>	
<b>Service ID</b>	0x12	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Reentrant for different LIN channels	
<b>Parameters (in)</b>	network	Identification of the LIN channel
	mode	Requested mode
<b>Return Value</b>	Result of operation	
	E_OK	Request accepted
	E_NOT_OK	Not possible to perform the request, e.g. not initialized.
<b>Description</b>	The mode switch will not be made instantly. The LinSM will notify the ComM when mode transition is made.	

#### 5.3.2.3.7. LinSM\_ScheduleRequest

<b>Purpose</b>	Change schedule table for a LIN channel.	
<b>Synopsis</b>	<pre>Std_ReturnType LinSM_ScheduleRequest ( NetworkHan- dleType network , LinIf_SchHandleType schedule );</pre>	
<b>Service ID</b>	0x10	
<b>Sync/Async</b>	Asynchronous	
<b>Reentrancy</b>	Reentrant for different LIN channels	

<b>Parameters (in)</b>	network	Identification of the LIN channel
	schedule	Index of the new Schedule table
<b>Return Value</b>	Result of operation	
	E_OK	Schedule table request has been accepted.
	E_NOT_OK	Schedule table switch request has not been accepted due to one of the following reasons: * LinSM has not been initialized * referenced channel does not exist (identification is out of range) * Referenced schedule table does not exist (identification is out of range) * Sub-state is not LINSM_FULL_COM
<b>Description</b>	The upper layer requests a schedule table to be changed on one LIN channel.	
	This services delegates the schedule request to the LinIf.	

#### 5.3.2.3.8. LinSM\_ScheduleRequestConfirmation

<b>Purpose</b>	Confirmation callout for schedule table changes.	
<b>Synopsis</b>	<pre>void <b>LinSM_ScheduleRequestConfirmation</b> ( NetworkHandleType network , LinIf_SchHandleType schedule );</pre>	
<b>Service ID</b>	0x20	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	network	Identification of the LIN channel
	schedule	Index of the new active Schedule table
<b>Description</b>	The LinIf module will call this callback when the new requested schedule table is active.	

#### 5.3.2.3.9. LinSM\_WakeupConfirmation

<b>Purpose</b>	Confirmation callout for WakeUp.	
<b>Synopsis</b>	<pre>void <b>LinSM_WakeupConfirmation</b> ( NetworkHandleType network , boolean success );</pre>	

<b>Service ID</b>	0x21	
<b>Sync/Async</b>	Synchronous	
<b>Reentrancy</b>	Reentrant	
<b>Parameters (in)</b>	<code>network</code>	Identification of the LIN channel (LinSM-ChannelIndex)
	<code>success</code>	True if wakeup was successfully sent, false otherwise
<b>Description</b>	<p>This callout must be called by the LinIf after a wakeup request has been received using LinIf_Wakeup. It signals if the wakeup request was successful.</p> <p>Note that the LinIf has to call this function in any case if the call to LinIf_Wakeup has returned E_OK. That means, even if there is no wakeup request carried out on the bus (because the LinIf channel is already awake), the confirmation must be called nonetheless.</p>	

### 5.3.3. Integration notes

#### 5.3.3.1. Exclusive areas

This section describes the exclusive areas used by the `LinSM` module.

##### 5.3.3.1.1. SCHM\_LINSM\_EXCLUSIVE\_AREA\_0

<b>Protected data structures</b>	All shared data that shall be protected from mutual access.
<b>Recommended locking mechanism</b>	This exclusive area must always be protected by a locking mechanism. The options for locking are described in the <code>EB tresos AutoCore Generic</code> documentation. Refer to the section Mapping exclusive areas in the basic software modules in the Integration notes section for details.

#### 5.3.3.2. Production errors

Production errors are not reported by the `LinSM` module.

### 5.3.3.3. Memory mapping

General information about memory mapping is provided in the EB tresos AutoCore Generic documentation. Refer to the section `Memory mapping and compiler abstraction` in the `Integration notes` section for details.

The following table provides the list of sections that may be mapped for this module:

Memory section
CODE
VAR_CLEARED_UNSPECIFIED
VAR_INIT_8
CONFIG_DATA_UNSPECIFIED

### 5.3.3.4. Integration requirements

#### WARNING

#### Integration requirements list is not exhaustive

The following list of integration requirements helps you to integrate your product. However, this list is not exhaustive. You also require information from the user's guide, release notes, and EB tresos AutoCore known issues to successfully integrate your product.

#### 5.3.3.4.1. `lim.LinSM.EB_INTREQ_LinSM_0001`

Description	The <code>LinSM_RequestComMode</code> function is non-reentrant if called for a transition from <code>LINSM_FULL_COM</code> to <code>LINSM_NO_COM</code> state for a channel that uses sleep support. During such a transition, the <code>LinIf</code> function <code>LinIf_GotoSleep</code> must be called which itself is non-reentrant.
Rationale	

#### 5.3.3.4.2. `lim.LinSM.EB_INTREQ_LinSM_0002`

Description	<code>LinSM_ScheduleRequest</code> is non-reentrant for the same LIN channel. According to <code>LINSM113</code> , the <code>LinSM_ScheduleRequest</code> function shall be reentrant. Contrary to this, the <code>LinSM_ScheduleRequest</code> function implementation is non-reentrant for the same LIN channel.
Rationale
